Please Note: These minutes are pending Board approval.
Board of Education
Newtown, Connecticut

Minutes of the Board of Education meeting held on April 4, 2023, at 7:00 p.m. in the Council Chambers, 3 Primrose Street.

D. Zukowski, Chair	C. Melillo
J. Vouros, Vice Chair	A. Uberti
D. Ramsey, Secretary	T. Vadas
D. Cruson	7 Staff
J. Kuzma	70 Public
J. Larkin (arrived 7:27 p.m.)	1 Press
A. Plante	
K. Kunzweiler	
D. Godino	

Ms. Zukowski called the meeting to order at 7:02 p.m.

<u>Item 1 – Pledge of Allegiance</u>

<u>Item 2 – Celebration of Excellence</u>
Dr. Kim Longobucco spoke about the National Merit Scholarship Program which is associated with the PSAT for our juniors and the following year being given a list of commended students, semifinalists and finalists. The Board members recognized finalist Kirtana Kunzweiler and semi-finalists Paige Armstrong, Joseph Augustine, Jennifer Dushi, Colin Edwards, Lauren Jacobs, Shreyas Potnuru, Anabel Saunders, Kate Shirk, Nicholas Tetreault, and Siddath Vakacherla.

<u>Item 3 – Consent Agenda</u>
MOTION: Mrs. Kuzma moved that the Board of Education approve the consent agenda which includes the donations to Newtown High School and Newtown Middle School, the Newtown Middle School field trip to the National Jazz Festival in Philadelphia, Pennsylvania, and the correspondence report. Mr. Cruson seconded. Motion passes unanimously.

<u>Item 4 – Public Participation</u>
Lynn Edwards, 3 Sand Hill Road, referred to the minutes of March 21, 2023 and asked that the minutes be amended to reflect the parent's comments.

<u>Item 5 – Reports</u>
Chair Report: Ms. Zukowski reported that she and other Board members were guest readers in our schools, and the annual district art show opened yesterday in the municipal center where it will be for two weeks. The following two weeks the Hawley student art will be displayed. We are participating in negotiations with the Custodian and Maintenance Association and the Federation of Educational Personnel. Our interviews for the Director of Facilities have started, the Board also received several Citizen's Request for Reconsideration of Library Media Materials forms and asked if the books would be available for the Board members, to which Mr. Melillo said he would provide.

Superintendent's Report: Mr. Melillo read the book "Potato Pants" to Mrs. Whitmore's Hawley kindergarten class on March 20 which the students enjoyed. Last week he also read to a Head O'Meadow fourth grade class and Hawley kindergarten classes. The middle school drama club will present the "Lion King" on April 27 and 28.

Committee Reports:
Mr. Cruson noted that the Policy Committee met March 22 to review the suspension and expulsion policy and will continue going through the staff medical policy.

Mr. Vouros said the Curriculum & Instruction Committee met regarding the CP Honors Chemistry curriculum and Multivariable Calculus curriculum being presented tonight.

Mr. Ramsey said the Communications Sub-committee met and discussed the current district highlights and were pleased that over 1,000 people read it. They also discussed the next issue which will center around the arts.

Mr. Cruson reported that the Town had their tabletop emergency drill this morning. The scenario was a test which included three bomb threats and two robberies in town. It went very well and the private schools were also represented. It was needed, well executed, and shows the district is taking it seriously

Student Representatives Report:
Ms. Kunzweiler noted that AP Spanish students went to the Wadsworth Museum and a group also went to Yale. A college fair took place last week. Yesterday students assisted in the art show. Spring sports began this week. This is a stressfull, but exciting time for seniors.

Item 6 – Presentations
Chemistry (CPA Honors) Curriculum:
Bridget Berechid and Chris Carley presented Chemistry CPA Honors Curriculum.
Multivariable Calculus:
Gene Hall, Math Dept. Chair, presented the Multivariable Calculus Curriculum.

Middle School Art Course Change Proposal:
MOTION: Mrs. Kuzma moved that the Board of Education approve the middle school art course change proposal. Mrs. Plante seconded.

Leigh Anne Hildebrandt, Kristen Ladue and Michelle Hiscavich spoke about the course changes which includes phasing out the art enrichment program for grade seven and eight and have the course offerings of General Art, 2D Studio Art, 3D Studio Art and Practical Arts. There has been a decrease in students applying for art courses because of reduced interest. Additional enrichment opportunities in the arts in the middle school include National Junior Art Honor Society, Jazz Band, Theater Production, and Chorus Club.
Motion passes unanimously.

Item 7 – Old Business
Medical Spanish Curriculum:
MOTION: Mrs. Kuzma moved that the Board of Education approve the Medical Spanish Curriculum. Mr. Vouros seconded. Motion passes unanimously.
Business Spanish Curriculum:
MOTION: Mrs. Kuzma moved that the Board of Education approve the Business Spanish Curriculum. Mr. Vouros seconded. Motion passes unanimously.

Item 8 – New Business
Hawley Move Plan:
MOTION: Mrs. Kuzma moved that the Board of Education approve the adjustment in the school calendar for the Hawley move. Mr. Cruson seconded.

Mr. Melillo said there are constraints in moving Hawley classes back from Sandy Hook and Reed. Teachers work 187 days. Moving in at the start of school this year we had major issues as to when walk throughs would happen and we had to move professional development to the summer but not everyone participated because it was not in their contract. Unpacking takes time and we looked to address all issues and that we lost a lot of PD time this year because of unpacking. The State mandates a new reading program this coming year and we want to be sure teachers have time to prepare. The State requires 180 school days and our students go 182 days so we plan to close Hawley two days earlier for the move. June 13 and 14 Hawley students can choose to go to the Community Center for educational presentations. Teachers will pack on June 13 and movers will be there June 14. Teachers will work one day over the summer to unpack. This plan is least impactful for Hawley students. It's a calendar change for Hawley and the Pre-K students
Motion passes unanimously.

Propane Fuel Contract:
MOTION: Mrs. Kuzma moved that the Board of Education award Hocon Gas the propane fuel contract. Mrs. Plante seconded. Motion passes unanimously.

Policy 5114 Suspension and Expulsion/Due Process:
Mr. Cruson said the change in this policy focused around expulsion hearings and brought by Mr. Melillo because of the difficulties in getting a quorum for the hearings which have to be held within 10 days. A hearing officer could be used when we can't reach a quorum. We also met with legal counsel on this problem and was told Board members aren't supposed to know more on the issues of the expulsion. There was not a complete agreement with the Board members on the Policy Committee. Some wanted the Board to be involved and some wanted to appoint a hearing officer. These hearings are difficult for those attending. Mr. Melillo feels he can get a hearing officer within the timeline if we can't get Board members. Ms. Zukowski said we might form a subcommittee of Board members who would commit to doing these hearings. If we can't get three to come in we would get a hearing officer.

Mrs. Kuzma was concerned the Board wouldn't find out about issues happening regularly if we used a hearing officer.

Ms. Zukowski wanted to build in flexibility to find the three people. We would create the committee with three members and an alternate.

Mr. Melillo said our Board members are members of the community. If they have a connection with any community members associated with the family, they need to take themselves off the committee. There are a lot of schedules that need to be aligned so it's good to have another choice.

Mr. Vouros said it was key that Board members are on the expulsion hearings. He would not like a hearing officer to take over such an important duty. It's rewarding to know this district takes care of the children and important that at least one of us is there.

Newtown Middle School Moving up and Newtown High School Graduation Dates:
MOTION: Mrs. Kuzma moved that the Board of Education approve June 12 for the Newtown Middle School Moving-up Ceremony and June 13 as the Newtown High School graduation date with June 14 as the rain date. Mr. Ramsey seconded. Motion passes unanimously.

Non-renewal list:
MOTION: Mrs. Kuzma moved that the Board of Education approve the 2022-2023 non-renewal list. Mrs. Plante seconded. Motion passes unanimously.

Minutes of March 21, 20232
MOTION: Mrs. Kuzma moved that the Board of Education approve the minutes of
March 21, 2023. Mr. Ramsey seconded.

MOTION: Ms. Zukowski moved to amend the minutes to replace 'expressed her negative experiences while her son attended Newtown Public Schools' with 'stated that for "well over a decade her son faced systematic racism, microaggression, and retaliation which has negatively impacted his education," that she says were never addressed'.
Mr. Cruson seconded. Vote: 6 ayes, 1 abstained (Mrs. Larkin)

Ms. Zukowski said Mrs. Pranger's public comment was deeply disturbing and learned that her son was attending school out of district for several years. Since joining the Board, we have worked diligently on policies related to racism and supported actions taken by the administration to ensure our schools' culture and climate welcome and embrace all of our students. We adopted policies related to equity and diversity, racial harassment, minority recruitment and more and include DEI presentations including providing all students access to the Anonymous Alert App. These efforts came after Ms. Pranger's son left the district but they are providing key tools needed to ensure that all Newtown students, including black children, feel welcome in our schools and can participate fully in our classes, services and activities.

Mr. Cruson asked to put into consideration for future minutes we provide language with a link to the town site so anyone will be able to watch the meeting. He reviewed the policy on minutes and this does not go against our policy to put that in place.

Mr. Ramsey noted that with this circumstance he feels we need to have a good sense of judgement in taking the minutes but those taking the minutes are not stenographers. The meetings are video-taped so verbatim accounts shared by the public are on the record.

Mr. Vouros thought we had investigated the ruling on notetaking and what is actually required. Ms. Zukowski recommended that Mr. Cruson reach out to each member regarding thoughts on this, make a proposal, and have an agenda item on how to improve minutes.

Vote on amended minutes: 6 ayes, 1 nay (Mrs. Larkin) Motion passes.

Item 9 – Public Participation
Please click here to view the public participation.

Glenn Boyle, 23 Park Lane, spoke about what good education means.
Don Lococo, 27 Hi Barlow Road, referred to our code of ethics and the March 21 meeting.
Jack Tanner, 13 Dodgingtown Road, spoke about the time involved in serving on the Board of Education.
Dave Mason, 35 Hi Barlow Road, spoke about banning the book.
Melissa Gomez, 6 Old Gate Lane, spoke about banning the book.
Tatum McGrady, 26 Philo Curtis Road, spoke about Black Lives Matter and being ally.
Aaron Malin, 5 Fleetwood Drive, spoke about the book.
Arlina Carias, 88 Hattertown Road, spoke about banning books.

David Landa, 13 Wiley Lane, spoke asked about a second grade teacher at Middle Gate.
Tim Stan, 6 Monitor Hill Road, spoke about banning books.
Julie Stan, 6 Monitor Hill Road, spoke about children not being accepted in school.
Danielle Lozer, 1 Grays Plain Road, spoke about a book being questioned at Reed and
suggested an app for parents regarding book choices.
Karin LaBanca, 33 Paugussett Road, spoke about banning books.
Chris Smith, 22 Wills Road, spoke about banning books.
Dave Zupan, 29 Mountain Manor Road, spoke about banning books.
Dylan Thomas, 15 Butterfield Road, appreciates what the Board and administrators do and for
listening to the parents.
William DeRosa, 60 Taunton Hill Road, protested the book being in a school library.
Laura Miller, 8 Diamond Drive, spoke about parents restricting books.
Alex Villamil, 11 Antler Pine Road, spoke about the book.
Treasa O'Sullivan, 10 Farmery Lane, named other books that could be questioned.
Steve Landau, 8 Walnut Tree Hill Road, spoke about the book.
Lara Clouden, 5 Meadowbrook Road, spoke about banning books.
Aiden Herbstman, 10 Pearl Street, spoke about the book.
Camryn Guion, 10 West Street, spoke about giving children what they deserve to grow up.
Kate McGrady, 26 Philo Curtis Road, spoke about banning books.
Linda O'Sullivan, 10 Farmery Lane, spoke about banning books.
Doug Lord, Newtown Librarian, 24 Main Street, spoke about banning books.
Keith Alexander, 8 Fawnwood Road, spoke about librarians making the decision on books.
Marc Carias, 88 Hattertown Road, spoke about the book.
Nicole Maddox, 14 Nighthawk Lane, spoke about banning books.
Lisa Kessler, 13 Pepperidge Road, spoke about banning books.
Wendy Leon Gambetta 19 Saw Mill Ridge Road, spoke about banning books.

MOTION: Mr. Cruson moved to adjourn. Mr Vouros seconded. Motion passes unanimously.

Item 10 – Adjournment
The meeting adjourned at 10:52 p.m.

Respectfully submitted:

March 21, 2023

To the Newtown Board of Education,

We respectfully request that you allow the Newtown Middle School Drama Club to accept a very generous donation of $5,000.00 from Ingersoll Automotive, Danbury CT.

These funds are much needed, as we have no seed money in our Drama Club due to the lack of performances during the pandemic, and we are extremely grateful for this donation.

Sincerely,

Jim Ross

Newtown Middle School Jazz Band
Mark Mahoney, Band Director

Trip Proposal

National Jazz Festival – Philadelphia, PA
April 21-22, 2023

https://www.nationaljazzfestival.org/

"An annual jazz festival inspiring high school and middle school musicians to take jazz to the next level through education, collaboration and celebration. All inclusive, no audition necessary." (NJF website) Students will perform and receive feedback from the

90 ensembles will be participating in this year's festival, representing 65 schools and 19 states and Puerto Rico. In addition to Newtown Middle School, CT will be represented by twelve high schools, and one other middle school jazz band.

This is an exciting opportunity for students to perform and compete. They will receive valuable critique and feedback and listen to other bands. Hearing and learning from other bands can be very inspirational. Mr. Mahoney had been taking his jazz bands, with great success, to the University of New Hampshire Jazz Festival for years. Post-Covid, that festival is no longer including middle school bands. He is excited to be able to provide that same experience at the National Festival in April.

Trip Itinerary

National Jazz Festival, Philadelphia PA
April 22, 2023

Number of Students: 18

Dates:

Departure from NMS – April 21, 2023 @ 1:00 p.m.
Return – April 22, 2023 (approximately midnight)

April 21:

Depart NMS @ 1:00 p.m
Arrive at hotel @ 4:00 p.m.
Evening welcome concert for all schools arriving night before (time TBD)

April 22:

Morning performance
After performance – watch other bands
Afternoon – lunch and fun @ Dave & Busters
Early evening – Awards ceremony
8:00 p.m. – depart for Newtown
Midnight – arrive back at NMS

Hotel:

One-night stay in Philadelphia:

Hampton Inn Convention Center
1301 Race Street
Philadelphia, PA 19107
215-665-9100

Working with Bruce Rickert: br@peakgrouptravel.com
https://www.nationaljazzfestival.org/2023-hotel-room-rates/

Transportation:

Traveling by coach bus (DATTCO) – small coach price of $3100

Cost per student - $394

Chaperones – 4 parents (2 male, 2 female)

TO: Newtown Board of Education
FROM: Tanja Vadas, Director of Business & Finance
SUBJECT: Propane Contract
DATE: March 30, 2023

On March 10, 2023 the Legal Notice for the RFP for Propane & Auto Dispensing Equipment was published in the Danbury News Times, The Bee and posted on the Town's website. On March 24, 2023 bids for this project were submitted. There were three (3) bids received for this project. The bids were for a one (1) year contract with a one (1) year extension.

Company	Address	PPG Year 1	PPG Year 2
Hocon Gas	86 Payne Road, Danbury, CT 06810	$1.2697	$1.2385
Mitchell Fuel	PO Box 186, Danbury, CT 06813	$1.326	$1.326
Santa Buckley Energy*	154 Admiral St., Bridgeport, CT 06601	$1.2845	$1.2982
*Price includes equipment adder		$0.0769	$0.0478

After review of the bids, it was determined that Hocon Gas met the criteria for lowest responsible bidder. It is my recommendation that the bid be awarded to Hocon Gas.

Tanja Vadas, Director of Business & Finance

cc: Christopher Melillo, Superintendent

2023-24 Propane Fuel Bid Analysis

Current contract with Hocon expires 6/30/2023
Current price per gallon $1.177 up to 170,000 gallons +/- 10%

Contracted gallons @ +/- 15%   160,000.00

Vendor	PPG Year 1	PPG Year 2	Annual Cost Year 1	Annual Cost Year 2
Hocon	$1.2697	$1.2385	$203,152	$198,160
Mitchell	$1.326	$1.326	$212,160	$212,160
Santa*	$1.3614	$1.346	$217,824	$215,360

*Price includes equipment adder $0.0769 $0.0478

CPA/Honors Chemistry Curriculum

Feb 2023
Bridget Berechid & Chris Carley

Goals of the Revisions:

- Concept based
- Alignment with NGSS

NGSS: Science and Engineering Practices

1. Asking questions and defining problems
2. Developing and using models
3. Planning and carrying out investigations
4. Analyzing and interpreting data
5. Using mathematics and computational thinking
6. Constructing explanations and designing solutions
7. Engaging in argument from evidence

Chemistry Skills
Unit 1

Conceptual Lens: Scientific Method

Concepts: Safety, Inquiry, Measurements, Conversions

Assessments: Bunsen Burner Lab, Density Lab, Metric and Nonmetric Conversions

Energy
Unit 2

Conceptual Lens: Transformations

Concepts: Heat, Temperature, Exothermic, Endothermic

Assessments: Heat vs Temperature Lab, Calorimetry Lab, Heating Curve Posters

Matter
Unit 3

Conceptual Lens: Changes in Matter

Concepts: Elements, Compounds, Mixtures, Chemical/Physical Properties and Changes

Assessments: Classifying Matter Activity, Separating Mixtures Lab, Chemical/Physical Changes Lab, Conservation of Matter Lab

Atomic Structure
Unit 4

Conceptual Lens: Properties

Concepts: Subatomic Particles, Isotope, Ion, EMR, Radioactivity

Assessments: Bohr Models of Atoms/Ions, Isotope Lab, Flame Test/EMR Lab

Periodic Law
Unit 5

Conceptual Lens: Patterns

Concepts: Group, Period, Atomic Radius, Nuclear Pull, Reactivity

Assessments: Properties of Metals/Nonmetals Lab, Graphically Interpreting Periodic Trends Lab, Periodic Metallic Trends Lab

Chemical Bonding
Unit 6

Conceptual Lens: Interactions

Concepts: Stability, Polarity, Electrostatic Forces, Intermolecular Forces

Assessments: Putting Ions in Their Hands Lab, Heat Treatment of Iron Lab, Molecular Geometry Lab

Chemical Reactions
Unit 7

Conceptual Lens: Change

Concepts: Reactant, Product, Conservation of Matter, Rate, Equilibrium

Assessments: Activity Series Lab, Solubility Table Lab, Chemical Reactions Lab, Rate of Reactions Lab

The Mole & Stoichiometry
Unit 8

Conceptual Lens: Conversions

Concepts: Mole, Atoms, Particles, Hydrate, Limiting/Excess Reactant, Yield

Assessments: Moles of Candle Lab, Hydrate Lab, Chalk Lab

Aqueous Solutions
Unit 9

Conceptual Lens: Interactions

Concepts: Solute, Solvent, Dilution, Saturation, Energy

Assessments: Hot/Cold Pack Lab, Factors that Affect Solubility Lab, Determining Solution Concentration by Colorimetric Analysis Lab

Acids & Bases
Unit 10

Conceptual Lens: Interactions

Concepts: pH, Concentration, Neutralization

Assessments: Determining the Percent Acetic Acid in Vinegar Lab

Gas Laws
Unit 11

Conceptual Lens: Behavior

Concepts: Motion, Compressible, Volume, Pressure, Temperature

Assessments: Boyle's Law Lab, Air Bag Lab, Molar Mass of Gas Lab, Universal Gas Constant Lab

Organic Chemistry
Unit 12

Conceptual Lens: Properties

Concepts: Functional Group, Monomer, Polymer

Assessments: Organic Modeling Lab, Making Soap Lab, Synthesizing Esters Lab

Art Dept. Course Offerings

Proposed Art Department Course Offerings for the 2023-2024 School Year

Leigh Anne Hildebrandt & Kristen Ladue
March 2023

Newtown Middle School

Proposal

Below is the proposed course change for the Art Department at the Middle School:

- Phase out the existing Art Enrichment program for both grades 7 and 8 (effective at the end of the current school year)
- Introduce 2D & 3D Studio art courses for 8th grade students for the 2023-2024 school year
- 2023 -204 Art Course Offerings:
    - **General Art** (grades 7 & 8)
    - **2D Studio Art** (grade 8)
    - **3D Studio Art** (grade 8)
    - **Practical Arts** (future initiative / grade 8)

  **All visual arts courses offer consistent opportunities to naturally differentiate learning and exploration for all students to elevate and enrich their experiences in the visual arts

    Additional Enrichment Opportunities in the Arts at NMS
- National Junior Art Honor Society
- Jazz Band
- Theater Production
- Chorus Club

Rationale

- Reduced interest in applying for the 7th grade program > resulted in less available courses at the MS > creates scheduling issues
- Proposed course change is not creating any new curriculum work > reduce budget implications for consumable materials that are course specific
- Transition to MS is challenging, coupled with learning loss from the pandemic has significantly impacted our students across the board > the proposed changes allow us to meet our students where they are currently at academically
- Offers greater vertical alignment with HS course offerings, and creates opportunities for HS to interact with MS more frequently
- This program change would allow us to almost triple the number of students we teach in the current art enrichment program (≈5% to 15%)
- Proposed courses offer 8th grade students a chance to explore specific art mediums and processes more in depth to refine their skills and develop their interests
- Offers students choice in their course selection, preparing them for HS course registration

Student Pathways
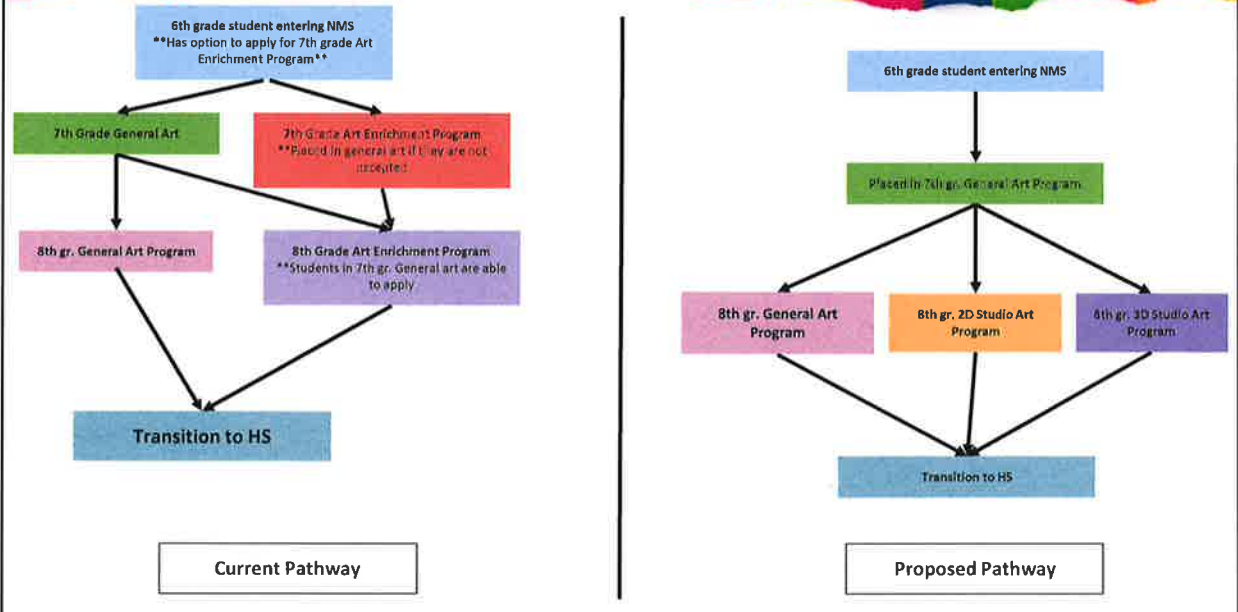

Historical Program Data

The data below reflects seven years of art enrichment students in grade 7, the number of applicants, the number of students enrolled, and the total percentage of the 7th graders served by the current art enrichment program.

- 16/17 school year: 57 applicants | 32 students enrolled | 359 students in 7th gr | 8.91% of 7th gr population
- 17/18 school year: 51 applicants | 26 students enrolled | 345 students in 7th gr | 7.54% of 7th gr population
- 18/19 school year: 39 applicants | 21 students enrolled | 340 students in 7th gr | 6.18% of 7th gr population
- 19/20 school year: 34 applicants | 18 students enrolled | 341 students in 7th gr | 5.28% of 7th gr population
- 20/21 school year: 33 applicants | 18 students enrolled | 292 students in 7th gr | 6.16% of 7th gr population
- 21/22 school year: 28 applicants | 15 students enrolled | 297 students in 7th gr | 5.05% of 7th gr population
- 22/23 school year: 40 applicants | 17 students enrolled | 313 students in 7th gr | 5.43% of 7th gr population

Data indicates:
- An average decrease of 5.8 applicants per year
- An average decrease of 3.4 enrolled students per year
- An average of 6.36% of the 7th grade student population is reached through the current art enrichment model

**Please note that there is an extensive information, application and evaluation process that determines the eligibility of enrolled students in the existing art enrichment program.

Survey Data

A recent survey was sent out to all NMS students regarding new course offerings:
- 437 students responded (as of 3/17/23)
- Both grade levels were asked
    - 7th grade - to see if the interest was there
    - 8th grade - for proof of concept, and reinforcement that a choice in class would have been widely preferred by students

-Of the students surveyed:
- 48% indicated that they'd be interested in a painting and drawing course
- 52 % indicated that they'd be interest in a sculpture and mixed media course
- 49% indicated they they'd be interest in a practical arts course

-Of the students surveyed:
- 57% indicated that they would be interested in both new course offerings

Enrichment

The NMS Art Department defines enrichment as:

Providing highly creative students with a supportive environment to explore and craft their artistic abilities, it challenges students to invent, imagine, create and problem solve in a fresh new way. We encourage artistic expression and spark the inner creative abilities of our students, which leads to a lifelong love of art, and opens a world of possibilities in every profession.

The new course offerings would:
- Offer opportunities for our students to explore the world of art making through a variety of artistic processes and advanced materials
- Foster an art studio-like atmosphere and community, while supporting student independence in the classroom
- Encourage students to take artistic risks and develop their sense of creativity through self-developed passion projects
- Students will be continuously challenged to generate original ideas, discuss and provide feedback, and push their creative comfort zones; both in-school and at-home
- Include additional learning experiences like field trips and guests artists to inspire exploration in visual art

As an example in the 2D studio art program:

Project: Gridded Portrait with graphite

Enrichment Opportunities: additional materials to enhance final project, larger scale, specific color palette (i.e. monochromatic), adjusting subject matter to a self-portrait, working in atypical materials (i.e coffee grounds), extension project

Course Descriptions

General Art	2D Studio Art	3D Studio Art
Demographic: 7th & 8th Gr. (several sections)	**Demographic:** 8th Grade (1-2 sections)	**Demographic:** 8th Grade (1-2 sections)
• Painting, Printing, Sculpting, Drawing • Survey course intended to provide students with a short exploration and experience into a specific process with limited materials	• Deeper dive into painting & drawing • Work with a wide range of typical and atypical art materials • Material immersion days to foster a sense of exploration and creative freedom • Field trips and guests artists • Passion project **Does not fulfill HS prerequisite requirements	• Deeper dive into sculpture & mixed media • Work with a wide range of typical and atypical art materials • Material immersion days to foster a sense of exploration and creative freedom • Field trips and guests artists • Passion project **Does not fulfill HS prerequisite requirements

G	Guiding Questions

Generalizations / Enduring Understandings	Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]
1. Scientific inquiry investigates natural phenomena through the scientific method.	1a. What are phenomena? (F) 1b. What are the components of the scientific method? (F) 1c. Can all phenomena be investigated with the scientific method? (P)
2. Scientific inquiry supports or refutes scientific hypotheses. 3. Qualitative and quantitative data create an objective record of observations.	2a. How does one create a hypothesis? (C) 2b. Has an experiment failed if it does not support the hypothesis? (P)
4. Equivalencies convert measurements between related units. 5. Measurement tools provide different levels of precision in data collection.	3a. What is qualitative data? (F) 3b. What is quantitative data? (F) 3c. Is one type of data more important than the other? (P) 3d. How important is objectivity in scientific inquiry? (P)
6. Significant figures preserve the precision of measurements.	4a. What are the base units in the metric system? (F) 4b. Why are conversions necessary? (C) 4c. Are all equivalencies exactly equal? (C) 4d. Do all units have equivalencies with all other units? (C)
7. Percent error reports the accuracy of data.	5a. What is meant by the precision in data? (F) 5b. How do scientists determine which tool is most appropriate for a particular task? (P)
	6a. How are significant figures recorded? (F) 6b. How do significant figures relate to measurement tools? (C) 6c. Can measurements be perfectly precise? (P) 6d. Is there a benefit to properly recording the significant figures of a measurement? (C)
	7a. What is meant by the accuracy of data? (F) 7b. What is experimental data compared to when assessing accuracy? (F) 7c. Can data be accurate without precision? (P) 7d. Is there an acceptable maximum percent error in an experiment? (P)

Standard(s)

Connecticut Core Standards / Content Standards

NGSS: Science and Engineering Practices

NGSS: 9-12

Practice 1. Asking questions (for science) and defining problems (for engineering)

Asking questions and defining problems in 9–12 builds on K–8 experiences and progresses to formulating, refining, and evaluating empirically testable questions and design problems using models and simulations.

Ask questions that arise from careful observation of phenomena, or unexpected results, to clarify and/or seek additional information.

Ask questions to determine relationships, including quantitative relationships, between independent and dependent variables.

Practice 3. Planning and carrying out investigations

Planning and carrying out investigations in 9-12 builds on K-8 experiences and progresses to include investigations that provide evidence for and test conceptual, mathematical, physical, and empirical models.

Plan and conduct an investigation individually and collaboratively to produce data to serve as the basis for evidence, and in the design: decide on types, how much, and accuracy of data needed to produce reliable measurements and consider limitations on the precision of the data (e.g., number of trials, cost, risk, time), and refine the design accordingly.

Select appropriate tools to collect, record, analyze, and evaluate data.

Practice 4. Analyzing and interpreting data

Analyzing data in 9–12 builds on K–8 experiences and progresses to introducing more detailed statistical analysis, the comparison of data sets for consistency, and the use of models to generate and analyze data.

Apply concepts of statistics and probability (including determining function fits to data, slope, intercept, and correlation coefficient for linear fits) to scientific and engineering questions and problems, using digital tools when feasible.

Practice 5. Using mathematics and computational thinking

Mathematical and computational thinking in 9-12 builds on K-8 experiences and progresses to using algebraic thinking and analysis, a range of linear and nonlinear functions including trigonometric functions, exponentials and logarithms, and computational tools for statistical analysis to analyze, represent, and model data. Simple computational simulations are created and used based on mathematical models of basic assumptions.

Use mathematical, computational, and/or algorithmic representations of phenomena or design solutions to describe and/or support claims and/or explanations.

Apply techniques of algebra and functions to represent and solve scientific and engineering problems.

Apply ratios, rates, percentages, and unit conversions in the context of complicated measurement problems involving quantities with derived or compound units (such as mg/mL, kg/m3, acre-feet, etc.).

Practice 6. Constructing explanations (for science) and designing solutions (for engineering)

Constructing explanations and designing solutions in 9–12 builds on K–8 experiences and progresses to explanations and designs that are supported by multiple and independent student-generated sources of evidence consistent with scientific ideas, principles, and theories.

Make a quantitative and/or qualitative claim regarding the relationship between dependent and independent variables.

Apply scientific ideas, principles, and/or evidence to provide an explanation of phenomena and solve design problems, taking into account possible unanticipated effects.

Apply scientific reasoning, theory, and/or models to link evidence to the claims to assess the extent to which the reasoning and data support the explanation or conclusion.

Access the interactive version of the NGSS here

Critical Content & Skills
What students must KNOW and be able to DO

- Understand proper design, execution, and reporting of an experiment through the scientific method
- Identify independent and dependent variables, constants, and the control in an experiment
- Distinguish between qualitative and quantitative observations
- Know the symbols and meanings of metric prefixes

- Use dimensional analysis to convert between metric and non-metric units
- Perform density calculations
- Convert between decimal form and scientific notation
- Identify and use laboratory equipment appropriately
- Utilize the correct technique to properly read instruments in order to take scientific measurements with correct significant figures
- Calculate percent error
- Assess whether data is accurate and/or precise
- Understand and apply basic laboratory safety rules

Core Learning Activities

- Math and Measurement Review
- Metric and Non-metric Conversions Practice
- Lab Safety Videos
- Lab Equipment Scavenger Hunt
- Reading Instruments Activity
- Bunsen Burner Lab
- Density Lab

Chemistry Math and Measurement Review .pdf
Metric System and Dimensional Analysis Practice 1 and 2.pdf
Dimensional Analysis Practice Set.pdf

Apply techniques of algebra and functions to represent and solve scientific and engineering problems.

Apply ratios, rates, percentages, and unit conversions in the context of complicated measurement problems involving quantities with derived or compound units (such as mg/mL, kg/m3, acre-feet, etc.).

NGSS: Disciplinary Core Ideas
NGSS: 9-12

PS3: Energy
PS3.A: Definitions of Energy

Energy is a quantitative property of a system that depends on the motionand interactions of matter and radiation within that system. That there is a single quantity called energy is due to the fact that a system's total energy is conserved, even as, within the system, energy is continually transferred from one object to another and between its various possible forms. (HSPS3-1),(HS-PS3-2)

At the macroscopic scale, energy manifests itself in multiple ways, such as in motion, sound, light, and thermal energy. (HSPS3-2) (HS-PS3-3)

These relationships are better understood at the microscopic scale, atwhich all of the different manifestations of energy can be modeled as either motions of particles or energy stored in fields (which mediate interactions between particles). This last concept includes radiation, a phenomenon in which energy stored in fields moves across space. (HSPS3-2)

PS3.B: Conservation of Energy and Energy Transfer

Conservation of energy means that the total change of energy in any system is always equal to the total energy transferred into or out of the system. (HS-PS3-1)

Energy cannot be created or destroyed, but it can be transported from one place to another and transferred between systems. (HS-PS3-1),(HSPS3-4)

Mathematical expressions, which quantify how the stored energy in asystem depends on its configuration (e.g. relative positions of charged particles, compression of a spring) and how kinetic energy depends on mass and speed, allow the concept of conservation of energy to be used to predict and describe system behavior. (HS-PS3-1)

Access the interactive version of the NGSS here

Critical Content & Skills
What students must KNOW and be able to DO

- Distinguish between potential and kinetic energy.
- Understand that chemical and physical changes can be exothermic or endothermic.
- Construct and analyze potential energy diagrams to show that energy is released or absorbed during a

chemical reaction
- Understand that energy released or absorbed during a chemical reaction (heat of reaction) is equal to the difference between the potential energy of the products and the potential energy of the products.
- Convert between Celsius and Kelvin temperature scales.
- Distinguish between temperature and heat energy.
- Describe how temperature is a measurement of the average kinetic energy of the particles in a sample of material. Temperature is not a form of energy.
- Utilize the concepts of kinetic and potential energy to explain physical processes that include: fusion (melting), solidification (freezing), vaporization (boiling/evaporation), condensation, sublimation, and deposition.
- Calculate heat changes during pure phases or phase changes.
- Perform calorimetry calculations.
- Explain that entropy is a measurement of randomness or disorder of a system. A system with greater disorder has greater entropy.
- Understand that systems in nature tend to undergo changes towards lower energy and higher entropy.

Assessments

Phase Change Diagram Project
Formative: Lab Assignment
Students are assigned a substance and use data including melting and boiling points, specific heats of solid, liquid and gaseous forms, heats of fusion and vaporization and starting/ending temperatures. They use the data to construct a labelled heating/cooling curve and calculate the total heat required for the temperature transition.
Phase Change Diagram Project.pdf
Calorimetry (Determining the Specific Heat of Metals) Lab
Formative: Lab Assignment
Students perform calorimetry using insulated cups to measure temperature changes in water in order to determine the specific heat of various metals. They then

	6. What happens to matter during a chemical reaction? (C)

Standard(s)

Connecticut Core Standards / Content Standards

NGSS: Science and Engineering Practices

NGSS: 9-12

Practice 2. Developing and using models

Modeling in 9–12 builds on K–8 experiences and progresses to using, synthesizing, and developing models to predict and show relationships among variables between systems and their components in the natural and designed worlds.

Evaluate merits and limitations of two different models of the same proposed tool, process, mechanism or system in order to select or revise a model that best fits the evidence or design criteria.

Design a test of a model to ascertain its reliability.

Develop, revise, and/or use a model based on evidence to illustrate and/or predict the relationships between systems or between components of a system.

NGSS: Crosscutting Concepts

NGSS: 9-12

Crosscutting Statements

5. Energy and Matter: Flows, Cycles, and Conservation – Tracking energy and matter flows, into, out of, and within systems helps one understand their system's behavior.

The total amount of energy and matter in closed systems is conserved.

NGSS: Disciplinary Core Ideas

NGSS: 9-12

PS1: Matter and Its Interactions

PS1.A: Structure and Properties of Matter

The structure and interactions of matter at the bulk scale are determined by electrical forces within and between atoms. (HSPS1-3),(secondary to HS-PS2-6)

PS1.B: Chemical Reactions

The fact that atoms are conserved, together with knowledge of the chemical properties of the elements involved, can be used to describe and predict chemical reactions. (HS-PS1-2),(HS-PS1-7)

Access the interactive version of the NGSS here

Critical Content & Skills
What students must KNOW and be able to DO

- Classify matter as a pure substance (elements or compounds) or mixture (homogeneous or heterogeneous).
- Know the symbols and names of commonly used elements on the periodic table.
- Predict how to separate mixtures based on their physical properties.
- Compare and contrast chemical and physical properties.
- Determine if a change in matter is chemical or physical.
- Describe indicators of chemical change.
- Demonstrate that matter is conserved during a chemical reaction.
- Calculate mass changes during chemical reactions.
- Compare and contrast the characteristics of solids, liquids and gases.
- Predict and explain how adding or subtracting heat energy alters the state of matter.
- Design and test an experiment to determine if mass is conserved during a chemical reaction.

Core Learning Activities

- Identifying Chemical and Physical Properties and Changes
- Physical Chemical Changes Lab
- Classifying Matter Practice
- States of Matter Activity
- Understanding Phase Change Diagrams
- Constructing and Analyzing Phase Change Diagrams
- Classifying Matter Lab
- Observing a Chemical Reaction Lab
- Conservation of Matter Calculations Practice
- Conservation of Matter Lab

Matter worksheets.pdf
Classification of Matter POGIL.pdf
Phase Change Diagrams.pdf
States of Matter Actvity.pdf
Phase Change Diagram wkst.pdf

Assessments	Resources
Classifying Matter Lab	*Professional & Student*
Formative: Lab Assignment	

Students collaborate to decide whether a sample is a pure substance or a mixture. Students may use resources: notes, texts, and online research to defend their decision.
Substance ID Lab.pdf

Observing a Chemical Reaction Lab
Formative: Lab Assignment
Students observe and mix several different substances together. They must then distinguish between types of matter (elements/compounds/mixtures) and types of changes (chemical or physical), as well as identifying indicators of chemical change. Alternatively, students observe and take notes on a demonstration where an aluminum soda can is placed into a solution of copper(II) chloride. Students observe the process over the next 5 classes, after which they use their data to identify indications that a chemical reaction occurred.
Observing a Chemical Reaction Lab.pdf

Physical and Chemical Changes Lab
Summative: Lab Assignment
Students perform various changes to matter and then determine whether those changes are physical or chemical based on their observations and data.
Physical and Chemical Changes.pdf

Conservation of Mass Lab
Summative: Lab Assignment
Students design and test an experiment for determining if the mass of the chemicals before and after a chemical reaction remains constant. The reaction between sodium bicarbonate and citric acid releases carbon dioxide as a gaseous product, requiring students to devise how to collect the gas in order to determine its mass as well.

Element Quiz
Summative: Written Test
Students demonstrate their knowledge of the names of common elements based on their atomic symbol, and vice versa.
element_quizA.doc

Matter Test
Summative: Written Test
Test will consist of multiple choice, short answer and calculation based questions. A test review with sample questions is included.
Matter Test Review.pdf

G Generalizations / Enduring Understandings	Guiding Questions *Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]*
1. Fundamental particles called atoms compose matter.	1. What fundamental observations and experiments led to the current understanding of the atomic model? (C)
2. Subatomic particles comprise atoms.	2a. What are the properties of protons, neutrons, and electrons? (F) 2b. Where are subatomic particles located in an atom? (F) 2c. What are the relative charges and masses of subatomic particles? (F)
3. Coulomb's Law predicts that particles with opposite charges attract each other and particles with similar charge repel each other.	
4. An atom's structure determines its elemental identity.	3a. What happens when two positively charged particles interact? (F) 3b. What happens when a positively charged particle and a negatively charged particle interact? (F) 3c. How does the magnitude of the charge impact the force between charged particles? (C) 3d. How does the distance between charged particles impact the force between them? (C)
5. Isotopes represent atoms of the same element consisting of different masses.	
6. Atoms of an element absorb and emit unique amounts of energy in the form of electromagnetic radiation that travels as waves.	
7. Quantum mechanics explains the behavior of electrons.	4a. How do scientists determine the number of protons, neutrons, and electrons for a particular element? (C) 4b. Can two different elements consist of the same number of protons, neutrons, and electrons? (P) 4c. Will more elements be added to the periodic table? (P)
8. An imbalance of protons and neutrons in the nucleus can render the nucleus unstable, leading to radioactive decay or fission.	4d. How can manipulating the number of protons, neutrons, and electrons alter the identity, mass, and charge of an atom/ion? (C)
9. The half-life of a radioactive isotope predicts the decay time of that isotope.	5a. Which subatomic particle determines the elemental identity of an atom? (F)
10. Strong forces can merge two nuclei, transforming	5b. Which subatomic particles contribute to the mass of an atom? (F)

them into a different nucleus. (Fusion)	5c. How many different isotopes can an element have? (C)
	5d. How is the weighted average mass of an element calculated from its isotopes? (C)
	6a. How can electrons in an atom be excited and what happens when they return to ground state? (C) 6b. How are wavelength, frequency, and energy related to each other in EMR waves? (C)
	6c. How do wavelength, frequency, and energy change across the EMR spectrum? (C)
	6d. How can atomic line spectra be used to identify elements? (C)
	7a. What is the difference between a quantum particle and a classical particle? (C)
	7b. How does the quantum behavior of an electron affect its movement? (C)
	8a. What are the types of radioactive decay? (F)
	8b. What happens to the nucleus during radioactive decay? (C)
	8c. Why are neutrons an essential component of the nucleus? (C)
	8d. What is nuclear fission? (F)
	8e. How are radioactive decay and nuclear fission different? (C)
	8f. How is nuclear fission used to generate power? (C)
	8g. Are the benefits of nuclear power worth the risks? (P)
	9a. What is a half-life? (F)
	9b. How is the half-life of a radioactive isotope determined? (C)
	9c. How can half-life be used to calculate the rate of radioactive decay? (C)

	9d. Do all isotopes have different half-lives? (P)
	9e. Can/should radioactive half-life be used constructively? (P)
	10a. What is nuclear fusion? (F)
	10b. How does the sun generate energy through nuclear fusion? (C)
	10c. How are man-made elements created? (C)
	10d. Is there a limit to the size of a nucleus that can be generated through nuclear fusion? (P)

Standard(s)
Connecticut Core Standards / Content Standards
NGSS: Science Performance Expectations (2017)
 NGSS: HS Physical Sciences

  HS.Structure and Properties of Matter
Performance Expectations

HS-PS1-3. Plan and conduct an investigation to gather evidence to compare the structure of substances at the bulk scale to infer the strength of electrical forces between particles.

HS-PS1-8. Develop models to illustrate the changes in the composition of the nucleus of the atom and the energy released during the processes of fission, fusion, and radioactive decay.

  HS.Forces and Interactions
Performance Expectations

HS-PS2-4. Use mathematical representations of Newton's Law of Gravitation and Coulomb's Law to describe and predict the gravitational and electrostatic forces between objects.

  HS.Waves and Electromagnetic Radiation
Performance Expectations

HS-PS4-1. Use mathematical representations to support a claim regarding relationships among the frequency, wavelength, and speed of waves traveling in various media.

HS-PS4-3. Evaluate the claims, evidence, and reasoning behind behind the idea that electromagnetic radiation can be described either by a wave model or a particle model, and that for some situations one model is more useful than the other.

NGSS: Science and Engineering Practices
 NGSS: 9-12

  Practice 5. Using mathematics and computational thinking
Mathematical and computational thinking in 9-12 builds on K-8 experiences and progresses to using algebraic

thinking and analysis, a range of linear and nonlinear functions including trigonometric functions, exponentials and logarithms, and computational tools for statistical analysis to analyze, represent, and model data. Simple computational simulations are created and used based on mathematical models of basic assumptions.

Use mathematical, computational, and/or algorithmic representations of phenomena or design solutions to describe and/or support claims and/or explanations.

Apply techniques of algebra and functions to represent and solve scientific and engineering problems.

Apply ratios, rates, percentages, and unit conversions in the context of complicated measurement problems involving quantities with derived or compound units (such as mg/mL, kg/m3, acre-feet, etc.).

NGSS: Disciplinary Core Ideas
NGSS: 9-12

PS1: Matter and Its Interactions
PS1.A: Structure and Properties of Matter

Each atom has a charged substructure consisting of a nucleus, which is made of protons and neutrons, surrounded by electrons. (HS-PS1-1)

The structure and interactions of matter at the bulk scale are determined by electrical forces within and between atoms. (HSPS1-3),(secondary to HS-PS2-6)

Stable forms of matter are those in which the electric and magnetic field energy is minimized. A stable molecule has less energy than the same set of atoms separated; one must provide at least this energy in order to take the molecule apart. (HS-PS1-4)

PS3: Energy
PS3.C: Relationship Between Energy and Forces

When two objects interacting through a field change relative position, theenergy stored in the field is changed. (HS-PS3-5)

PS4: Waves and Their Applications in Technologies for Information Transfer
PS4.A: Wave Properties

The wavelength and frequency of a wave are related to one another by thespeed of travel of the wave, which depends on the type of wave and the medium through which it is passing. (HS-PS4-1)

[From the 3–5 grade band endpoints] Waves can add or cancel one anotheras they cross, depending on their relative phase (i.e., relative position ofpeaks and troughs of the waves), but they emerge unaffected by each other.(Boundary: The discussion at this grade level is qualitative only; it can bebased on the fact that two different sounds can pass a location in differentdirections without getting mixed up.) (HS-PS4-3)

PS4.B: Electromagnetic Radiation

Electromagnetic radiation (e.g., radio, microwaves, light) can be modeled as a wave of changing electric and magnetic fields or as particles called photons. The wave model is useful for explaining many features of electromagnetic radiation, and the particle model explains other features.(HS-PS4-3)

When light or longer wavelength electromagnetic radiation is absorbed inmatter, it is generally converted into thermal energy (heat). Shorterwavelength electromagnetic radiation (ultraviolet, X-rays, gamma rays) canionize atoms and cause damage to living cells.(HS-PS4-4)

Atoms of each element emit and absorb characteristic frequencies of light.These characteristics allow identification of the presence of an element, even in microscopic quantities. (secondary to HS-ESS1-2)

Critical Content & Skills
What students must KNOW and be able to DO

- Describe the mass, charge and location of protons, neutrons, and electrons.
- Define mass number and atomic number.

- Determine the mass, charge and elemental identity of an atom/ion based on the atomic number/mass number and/or the number of protons, neutrons, and electrons.
- Calculate the average atomic mass of an element.
- Compare the Quantum Mechanical model of the atom to the Bohr model.
- Construct Bohr models of atoms/ions.
- Distinguish between principal energy levels, sublevels and orbitals in the Quantum Mechanical model of the atom.
- Write electron configurations and orbital diagrams for atoms or ions.
- Define what is meant by ground state versus excited state when referring to the position of electrons in atoms.
- Describe the movement of an electron in an atom when it absorbs or releases energy.
- Determine how the distance an electron falls impacts the type of EMR released by the atom.
- Calculate the wavelength, frequency and energy of EMR waves.
- Explain the difference between fission and fusion.
- Compare and contrast the different types of radiation including alpha, beta and gamma.
- Write and balance nuclear reaction equations.
- Calculate the half-life of an isotope.
- Describe how nuclear power works and its benefits/detriments.

Core Learning Activities

- Calculating Atomic Number, Mass Number, and Charge of Atoms and Isotopes
- Calculating the Average Atomic Mass of an Element
- Pennium Isotope Lab
- Calculating the Wavelength, Frequency, and Energy of EMR
- Constructing Electron Diagrams
- Writing Electron Configurations
- Flame Test Lab
- Spectroscopy Lab
- Creating Bohr Models of Atoms and Ions
- Calculating Half-life of Isotopes
- Writing Nuclear Equations
- Nuclear Atom POGIL
- Radioactive Decay of Candium Lab

Nuclear Atom POGIL.pdf
Half life Problems.pdf

Assessments

Pennium Lab
Formative: Lab Assignment
Pennies from before and after 1982 are counted and masses in order to calculate the average atomic mass of Pennium (the weighted average).
Pennium Lab.doc
Spectroscopy Lab
Formative: Lab Assignment
Spectroscopes are used to view quantized visible light energy emitted from ionized glass tubes. Students use the wavelengths of the EMR to calculate the frequency and energy of the emitted light. Students must also view a spectral pattern and identify the unknown element(s) present.

G Generalizations / Enduring Understandings	Guiding Questions *Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]*
1. The periodic table organizes elements according to	

their physical and chemical properties.

2. Scientists predict the chemical and physical properties of elements based on their atomic number and position on the periodic table due to the repeating patterns that are present.

3. Periods(rows) and families(columns) on the periodic table represent the structure of the atom.

4. Atomic structure determines atomic/ionic radius, electronegativity, ionization energy, reactivity, and metallic character.

1a. What are the different types of elements? (F)

1b. How do chemical and physical properties change across the periodic table? (C)

2a. How are the properties of elements in a family the same? How are they different? (C)

2b. How are the properties of elements in a period the same? How are they different? (C)

2c. Is the behavior of an element always predictable based on its atomic structure? (P)

3a. What does the period of an element represent? (F)

3b. What does the family of an element represent? (F)

3c. How do the number of valence electrons in atoms relate to their periodic trends? (C)

4a. What is meant by electronegativity, ionization energy, atomic/ionic radii, reactivity, and metallic character? (F)

4b. What periodic trends exist for electronegativity, ionization energy, atomic/ionic radius, reactivity, and metallic character? (C)

4d. Are there defined boundaries between metals, nonmetals, and metalloids? (P)

Access the interactive version of the NGSS here

Critical Content & Skills
What students must KNOW and be able to DO

- Explain how chemical and physical properties of elements repeat periodically when arranged by increasing atomic number according to Periodic Law.
- Identify the number of valence electrons an element has based upon its group/column on the periodic table.
- Identify the ionic charge of an element based upon its group/column on the periodic table.
- Classify elements as metals, nonmetals, and metalloids based on their position on the periodic table.
- Describe the properties of metals, non-metals and metalloids.
- Identify the location of alkali metals, alkaline earth metals, transition metals, inner transition metals, halogens and noble gasses on the periodic table.
- Define the terms nuclear pull, atomic radius, electronegativity, ionization energy.
- Predict and explain trends in nuclear pull, atomic radius, electronegativity, and ionization energy as you move across and down the periodic table.
- Predict the chemical behavior of an element based on its atomic number and location on the periodic table.

G	Guiding Questions
Generalizations / Enduring Understandings	*Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]*

1. Atoms form compounds through chemical bonding.	1a. Which subatomic particles are involved in chemical bonding? (F)
	1b. Do all elements form chemical bonds? (P)
2. Atoms manipulate their valence electrons in order to produce more stable electron configurations.	
	2a. What is a cation? (F)
3. Ionization energy and electronegativity determine the type of chemical bond formed.	2b. What is an anion? (F)
	2c. How can it be determined whether an atom will gain or lose electrons when bonding? (C)
4. The breaking or forming of chemical bonds requires the absorption or release, respectively, of energy.	2d. How do the interactions of electrons differ in covalent, ionic and ionic bonding? (C)
5. Electron structure determines the shape and polarity of a molecule.	3a. What are the types of chemical bonds? (F)
	3b. How do ionization energy and electronegativity determine the type of bond formed? (C)
6. Molecules and atoms attract to each other by electrostatic forces called intermolecular forces(IMFs).	3c. How do differences in electronegativity between atoms determine the polarity of a covalent bond? (C)
	3d. Can an element form more than one type of chemical bond? (C)
	4a. Is it more energetically favorable to break or form a chemical bond? (F)
	4b. Why does forming a chemical bond release energy? (C)
	5a. How is the shape of a molecule determined? (C)
	5b. What differentiates a polar from a non-polar molecule? (C)
	6a. What are the types of intermolecular forces (IMFs)? (F)
	6b. How do IMFs influence the state of matter of a substance? (C)
	6c. Which exerts a greater influence on the properties of a substance: the type or the number of IMFs between molecules? (P)

Standard(s)

Connecticut Core Standards / Content Standards

NGSS: Science Performance Expectations (2017)

NGSS: HS Physical Sciences

HS.Structure and Properties of Matter

Performance Expectations

HS-PS1-1. Use the periodic table as a model to predict the relative properties of elements based on the patterns of electrons in the outermost energy level of atoms.

HS-PS1-3. Plan and conduct an investigation to gather evidence to compare the structure of substances at the bulk scale to infer the strength of electrical forces between particles.

HS.Chemical Reactions

Performance Expectations

HS-PS1-2. Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, and knowledge of the patterns of chemical properties.

HS-PS1-4. Develop a model to illustrate that the release or absorption of energy from a chemical reaction system depends upon the changes in total bond energy.

NGSS: Disciplinary Core Ideas

NGSS: 9-12

PS1: Matter and Its Interactions

PS1.A: Structure and Properties of Matter

The structure and interactions of matter at the bulk scale are determined by electrical forces within and between atoms. (HSPS1-3),(secondary to HS-PS2-6)

Stable forms of matter are those in which the electric and magnetic field energy is minimized. A stable molecule has less energy than the same set of atoms separated; one must provide at least this energy in order to take the molecule apart. (HS-PS1-4)

PS2: Motion and Stability: Forces and Interactions

PS2.B: Types of Interactions

Newton's law of universal gravitation and Coulomb's law provide the mathematical models to describe and predict the effects of gravitational and electrostatic forces between distant objects.(HS-PS2-4)

Attraction and repulsion between electric charges at the atomicscale explain the structure, properties, and transformations of matter, as well as the contact forces between material objects.(HS-PS2-6),(secondary to HS-PS1-1),(secondary to HS-PS1-3)

PS3: Energy

PS3.C: Relationship Between Energy and Forces

When two objects interacting through a field change relative position, theenergy stored in the field is changed. (HS-PS3-5)

PS3.D: Energy in Chemical Processes and Everyday Life

Although energy cannot be destroyed, it can be converted to less usefulforms—for example, to thermal energy in the surrounding environment.(HS-PS3-3),(HS-PS3-4)

Critical Content & Skills
What students must KNOW and be able to DO

- Write the names of chemical compounds based on their formulas.
- Write the chemical formulas of compounds based on their names.
- Know the seven diatomic elements.
- Describe why atoms form bonds
- Compare the characteristics of ionic, covalent and metallic compounds
- Predict the type of bonding that two elements will engage in given their location on the periodic table.
- Use electronegativity differences to determine the type of chemical bond that will form.
- Know the difference between cations and anions.
- Represent the valence structure of atoms and ions using Lewis Dot Diagrams.
- Draw Lewis structures to show how electrons are transferred between atoms in an ionic bond or shared between atoms in a covalent bond
- Predict the shape and polarity structure of molecules using Lewis Dot Diagrams.
- Determine the hybridization of a central atom in a molecule.
- Identify the type(s) of intermolecular forces present between molecules.
- Assess the relative strength of intermolecular attractions between different molecules/atoms.

Core Learning Activities

- Bonding Webquest
- Classifying Chemical Bonds
- Criss Cross Formula Writing
- Constructing Lewis Dot Diagrams of Ionic and Molecular Compounds
- Ionic and Covalent Naming and Formula Writing Practice
- Putting Ions in their Hands Lab
- Heat Treatment of Steel Lab
- Molecular Modeling Lab

Classifying Chemical Bonds.pdf
Covalent Bonding with Lewis Dots Practice.pdf
Criss Cross Formula Writing.pdf
Lewis Dots with Ionic Bonding Practice.pdf
Mixed Ionic Covalent Formulas and Naming Practice .pdf

Assessments

Heat Treatment of Steel Lab
Formative: Lab Assignment
After hardening, annealing and tempering steel bobby pins, students compare their springiness and ability to bend or break. They then connect these properties to the steel's crystalline structure on the atomic/molecular level.
Heat treatment of Steel Lab.pdf
Molecular Geometry Lab
Formative: Lab Assignment
Students use the model kits to learn about VESPR theory and learn how to correlate 2D Lewis structures with 3D geometrical shapes.
Molecular Geometry Reference orig.pdf
Molecular Geometry Lab .pdf
Putting Ions in their Hands Lab (Flinn Scientific)
Formative: Lab Assignment
Students use paper cut outs of cations and anions, which are sized proportionally to their charges, to build models of

G Generalizations / Enduring Understandings	Guiding Questions *Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]*
1. Chemical bonds break and then new bonds form to produce new substances.	1a. What is a reactant? (F)

	1b. What is a product? (F)
2. Chemical reactions conserve matter.	1c. Why must bonds be broken in order to form new bonds? (C)
	1d. Do all bonds in a molecule always need to break in a chemical reaction? (P)
3. The type of reactants determines the type of reaction that occurs.	
	2a. How do balanced chemical reactions represent the conservation of matter? (C)
4. Substances lose or gain energy during a reaction as chemicals bonds are broken and formed.	2b. Why must a chemical reaction conserve matter? (C)
5. The difference between the energy of the products and reactants determines the heat of reaction.	
	3a. What are the five basic types of reactions? (F)
6. Balanced chemical equations represent chemical reactions.	3b. How is a reaction type predicted from the reactants? (C)
	3c. Do all chemical reactions fall into these five types of reaction? (P)
7. The rate of a reaction relates the quantity of a substance reacted to the time required to react it.	
	4a. Is it more favorable for a reaction to gain energy or lose energy? (F)
8. The rate of a reaction correlates to changes in temperature, concentration, surface area, and the addition of a catalyst.	4b. Can the amount of energy gained or released by a reaction change? (C)
9. Reversible reactions proceed until the forward rate of reaction equals the reverse rate of reaction and establish equilibrium.	5a. How is the heat of reaction calculated using the energy of the reactants and products? (C)
	5b. Can the heat of a reaction be determined experimentally? (P)
	6a. What is the significance of coefficients in the balanced equation? (F)
	6b. Why can't chemical formulas be changed to balance a chemical equation? (C)
	7a. What is the definition of "rate"? (F)
	7b. How are rates expressed? (F)
	7c. Can the rate of a reaction change over time? (P)

	8a. How does increasing the temperature change the rate of a reaction? (C)
	8b. How does increasing the concentration of a reactant change the rate of a reaction? (C)
	8c. How does increasing the surface area of a reactant change the rate of a reaction? (C)
	8d. Why does the addition of a catalyst cause the rate of reaction to increase? (C)
	9a. What is a reversible reaction? (F)
	9b. Are all reactions reversible? (P)
	9c. Can equilibrium be disturbed? (i.e. can a reaction leave equilibrium?) (C)
	9d. Do all reversible systems reach equilibrium in the same amount of time? (C)

Standard(s)
Connecticut Core Standards / Content Standards
NGSS: Science Performance Expectations (2017)
 NGSS: HS Physical Sciences

  HS.Chemical Reactions
Performance Expectations

HS-PS1-2. Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, and knowledge of the patterns of chemical properties.

HS-PS1-4. Develop a model to illustrate that the release or absorption of energy from a chemical reaction system depends upon the changes in total bond energy.

HS-PS1-6. Refine the design of a chemical system by specifying a change in conditions that would produce increased amounts of products at equilibrium.*

HS-PS1-7. Use mathematical representations to support the claim that atoms, and therefore mass, are conserved during a chemical reaction.

NGSS: Disciplinary Core Ideas
 NGSS: 9-12

  PS1: Matter and Its Interactions
PS1.A: Structure and Properties of Matter

The periodic table orders elements horizontally by the number of protons in the atom's nucleus and places those with similar chemical properties in columns. The repeating patterns of this table reflect patterns of outer electron states. (HS-

PS1-1),(HSPS1-2)

Stable forms of matter are those in which the electric and magnetic field energy is minimized. A stable molecule has less energy than the same set of atoms separated; one must provide at least this energy in order to take the molecule apart. (HS-PS1-4)

PS1.B: Chemical Reactions

Chemical processes, their rates, and whether or not energy is stored or released can be understood in terms of the collisions of molecules and the rearrangements of atoms into new molecules, with consequent changes in the sum of all bond energies in the set of molecules that are matched by changes inkinetic energy. (HSPS1-4),(HS-PS1-5)

In many situations, a dynamic and condition-dependent balance between a reaction and the reverse reaction determines the numbers of all types of molecules present. (HS-PS1-6)

The fact that atoms are conserved, together with knowledge ofthe chemical properties of the elements involved, can be used to describe and predict chemical reactions. (HS-PS1-2),(HS-PS1-7)

PS3: Energy
PS3.B: Conservation of Energy and Energy Transfer

Energy cannot be created or destroyed, but it can be transported from one place to another and transferred between systems. (HS-PS3-1),(HSPS3-4)

PS3.D: Energy in Chemical Processes and Everyday Life

Although energy cannot be destroyed, it can be converted to less usefulforms—for example, to thermal energy in the surrounding environment.(HS-PS3-3),(HS-PS3-4)

Critical Content & Skills
What students must KNOW and be able to DO

- Explain how mass and energy are conserved during all chemical reactions.
- Use coefficients to balance chemical equations.
- Write balanced chemical equations and net ionic equations.
- Identify and use symbols to represent states of matter and reaction conditions in chemical equations.
- Classify reactions as combination, decomposition, combustion, single displacement or double displacement reactions based on the reactants and products present.
- Given a set of reactants, predict the products for different types of chemical reactions.
- Use an activity series to predict whether single replacement reactions will occur.
- Use a solubility table to predict whether double replacement reactions will occur.
- Calculate the rate of a reaction.
- Describe how the rate of a reaction depends on the nature of the reactants, the concentration of the reactants, the surface area of the reactants, the temperature, and whether a catalyst or inhibitor is present.
- Describe how the use of a catalyst increases the rate of a reaction by lowering its activation energy by changing the reaction's pathway.
- Calculate the enthalpy of a reaction.
- Determine if a reaction is endothermic or exothermic based upon the sign of the enthalpy value (positive = endothermic, negative = exothermic).

Core Learning Activities

- Balancing Equations Practice
- Classifying Chemical Reactions Practice and POGIL
- Writing Chemical Equations Practice
- Predicting Single and Double Replacement Reactions
- Activity Series of Metals (Single Replacement) Lab
- Creating a Solubility Table (Double Replacement) Lab
- Obtaining Copper from its Ore Lab

- Classification of Chemical Reactions Lab
- Factors that Affect the Rate of a Chemical Reaction Lab

Shall We Dance POGIL.pdf
Balancing Equations 1-5.pdf
Writing Chemical Equations 1 and 2.pdf
Single and Double Replacement Reactions.pdf
Lab- Refining a copper ore.pdf

Assessments

Chemical Reactions Lab
Formative: Lab Assignment
Students will perform a series of chemical reactions and make observations. Students must then use their chemistry knowledge to predict products, write balanced chemical equations, classify reaction types and list indicators of chemical change.
Classifying Chemical Reactions Lab.pdf
Classifying Chemical Reactions Lab Answer Sheet.pdf
Solubility Table (Double Replacement) Lab
Formative: Lab Assignment
Students will perform experiments to create a solubility table to learn about double replacement reactions.
Double Replacement Lab .pdf
Activity Series of Metals (Single Replacement) Lab
Formative: Lab Assignment
Students will perform experiments to create an activity series of metals to learn about single replacement reactions.
Single Replacement Lab.pdf
Factors that Affect Rates of Reaction Lab
Summative: Lab Assignment
An inquiry-based lab where students will determine two factors that could affect the rate of a reaction and then design an experiment to test their hypothesis.
Factors that Affect Rates of Reaction.pdf
Chemical Reactions Test
Summative: Written Test
Will include a combination of MC and short answer. A test review with sample questions is included.
Chemical Reactions Test Review .pdf

G Generalizations / Enduring Understandings	Guiding Questions *Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]*
1. The mole conveys a quantity of atoms, molecules, or formula units in a sample.	1a. How many atoms, molecules or formula units are in one mole of a substance? (F)

	1b. How can the number of moles of a substance be calculated from the mass or volume of that substance? (C)
2. Atoms, molecules, and formula units react in ratios of quantity.	
	2a. Why do atoms, molecules and formula units react based on quantity? (C)
3. The mass of a reactant determines the mass of a product produced.	
	2b. Can the number of moles or particles (atoms, molecules, formula units) be measured directly? (C)
4. One reactant limits the amount of product produced, while all other reactants remain as excess.	
	3a. What is the relationship between the amount of a reactant and the amount of product in a chemical reaction? (P)
5. Stoichiometry predicts the theoretical yield of a producible product.	3b. How can the amount of a product be calculated using the amount of a reactant in a chemical reaction? (C)
6. In practice, chemical reactions produce less product than the theoretical yield, called the actual yield.	
	4a. What is a limiting reactant? (F)
	4b. What is an excess reactant? (F)
	4c. What happens to a reaction when a reactant is totally consumed? (F)
	4d. Why does only one reactant control the yield of a reaction? (C)
	4e. Can any amount of the limiting reactant remain after a reaction has completed? (C)
	5. Why does stoichiometry not predict the actual amount of product that will be produced? (C)
	6a. What is the yield of a reaction? (F)
	6b. Can a reaction ever produce an experimental yield that is more than the theoretical yield? (C)
	6c. How is the experimental yield calculated as a percentage of the theoretical yield? (C)
	6d. What could cause a reaction to produce a yield that is less than the theoretical yield? (C)

NGSS: HS Physical Sciences

 HS.Chemical Reactions
Performance Expectations

HS-PS1-2. Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, and knowledge of the patterns of chemical properties.

HS-PS1-7. Use mathematical representations to support the claim that atoms, and therefore mass, are conserved during a chemical reaction.

NGSS: Science and Engineering Practices
 NGSS: 9-12

 Practice 5. Using mathematics and computational thinking
Mathematical and computational thinking in 9-12 builds on K-8 experiences and progresses to using algebraic thinking and analysis, a range of linear and nonlinear functions including trigonometric functions, exponentials and logarithms, and computational tools for statistical analysis to analyze, represent, and model data. Simple computational simulations are created and used based on mathematical models of basic assumptions.

Use mathematical, computational, and/or algorithmic representations of phenomena or design solutions to describe and/or support claims and/or explanations.

Apply techniques of algebra and functions to represent and solve scientific and engineering problems.

Apply ratios, rates, percentages, and unit conversions in the context of complicated measurement problems involving quantities with derived or compound units (such as mg/mL, kg/m3, acre-feet, etc.).

NGSS: Disciplinary Core Ideas
 NGSS: 9-12

 PS1: Matter and Its Interactions
PS1.B: Chemical Reactions

In many situations, a dynamic and condition-dependent balance between a reaction and the reverse reaction determines the numbers of all types of molecules present. (HS-PS1-6)

The fact that atoms are conserved, together with knowledge of the chemical properties of the elements involved, can be used to describe and predict chemical reactions. (HS-PS1-2),(HS-PS1-7)

Access the interactive version of the NGSS here

Critical Content & Skills
What students must KNOW and be able to DO

- Calculate molar mass of a substance.
- Convert between moles of a substance and the mass, volume, or number of particles in the substance.
- Calculate the percent composition of a substance, including the percent water in a hydrate using laboratory data or empirical formulas.
- Define and calculate empirical and molecular formulas given the percent composition of a compound.
- Use stoichiometric calculations to convert between any two substances participating in a chemical reaction.
- Use stoichiometry to determine the limiting reactant and the amount of excess reactant remaining at the end of the chemical reaction.
- Calculate the percent yield of a chemical reaction.

Core Learning Activities

- One and Two Step Mole Conversions Practice
- Calculating Percent Composition Practice
- Calculating Empirical and Molecular Formulas Practice
- Molar Quantities Lab
- Moles of Candle Lab
- Calculating the Percent Mass of Water in a Hydrate Lab
- Calculating Empirical Formulas of Hydrates (Triple Hydrate) Lab
- Stoichiometry Practice: Moles, Mass, Volume & Percent Yield
- Stoichiometry and Limiting Reactant Practice
- Chalk Lab
- Decomposition of Baking Soda Lab

Mixed 1&2 Step Mole Conversions #2.pdf
Molar Quanitites Lab .pdf
Determining Percent Composition, EF & MF Practice.pdf
Stoichiometry Problems 1-4 Moles, Mass, Volume & Percent Yield.pdf
Stoichiometry and Limiting Reactants.pdf

Assessments

Decomposition of Baking Soda Lab
Formative: Lab Assignment
Students experimentally decompose baking soda and use their stoichiometry calculations and percent yield data to determine which of three possible reaction pathways actually occurred.
Decomposition of Baking Soda Lab .pdf

Chalk Lab
Formative: Lab Assignment
Students perform a chemical reaction to synthesize calcium carbonate (chalk). They perform stoichiometric calculations to determine how their yield compares to the theoretical value and use this information to evaluate the effectiveness of their lab technique.
Chalk Lab.pdf

Determining the Empirical Formula of a Hydrate Lab
Formative: Lab Assignment
Students use the masses of three different hydrates, before and after heat treatment, to calculate the empirical formulas for each. They then calculate their percent error based upon the theoretical values for each to evaluate where experimental errors may have occured.
Empirical Formula of a Hydrate Lab Triple Hydrate Lab .pdf

Hydrate Lab
Formative: Lab Assignment
Students use masses of magnesium sulfate heptahydrate, before and after heating, in order to calculate the percent water in their hydrate sample. They then use the empirical formula of the compound to calculate the theoretical value for the percent water in the hydrate and use this to evaluate their percent error for the experiment.
Determination of the Percentage of Water of Hydration in a Crystalline Salt Lab .pdf

Moles of Candle Lab
Formative: Lab Assignment
Students mass a candle before and after burning for ten minutes. They then perform calculations to determine the number of moles of candle wax burned during this time.
Moles of Candle Lab.pdf

Mole Test
Summative: Written Test

Generalizations / Enduring Understandings

1. A solvent dissolving a solute creates a solution.

2. Electrostatic attractions facilitate a solvent dissolving a solute.

Guiding Questions
Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]

1a. What are the components of a solution? (F)

1b. What does a solvent do to a solute? (F)

	2a. What forces are present to attract a solute and solvent to each other? (C)
3. A solution's physical properties exhibit differences from the pure solute and solvent.	2b. Can all solvents and solutes attract to each other? (P)
	2c. What types of substances are most likely to dissolve together? (C)
4. A solvent dissolving a solute results in an exothermic or endothermic process.	2d. Can a solute become a solvent and vice versa? (P)
5. The concentration of a solution conveys the amount of solute dissolved in a set amount of solvent.	3a. What physical properties might change when a substance dissolves into a solution? (C)
	3b. Are the physical properties of a solution a combination of the properties of the solute and solvent? (P)
6. Solution concentrations can facilitate stoichiometric calculations.	3c. Do the physical properties of a solution change as concentration changes? (C)
7. A solution maintains the same amount of solute when diluted to a lower concentration.	
	4a. Is the separation of solute particles from each other an exothermic or endothermic process? (F)
	4b. Is the separation of solvent particles from each other an exothermic or endothermic process? (F)
	4c. Is the attraction between a solute and solvent exothermic or endothermic? (F)
	4d. What is required for the overall process of dissolving a solute into a solvent to be classified as exothermic or endothermic? (C)
	5a. In what ways can the concentration of a solution be recorded? (F)
	5b. Are all types of concentration equally applicable in all scenarios? (P)
	5c. How can the concentration of a solution be calculated? (C)
	5d. What is an unsaturated solution? (F)
	5e. What is a saturated solution? (F)
	5f. What is a supersaturated solution? (F)

	6a. What units are used to measure the amount of a solution? (F)
	6b. How can the amount of a solution relate to the moles of the solute? (C)
	6c. Does a solution's change in concentration during a chemical reaction invalidate the stoichiometric calculations? (P)
	7a. Why do the moles of solute remain constant when a solution is diluted? (C)
	7b. How can the concentration of a solution be calculated after dilution? (C)

Standard(s)

Connecticut Core Standards / Content Standards

NGSS: Science Performance Expectations (2017)

NGSS: HS Physical Sciences

HS.Structure and Properties of Matter

Performance Expectations

HS-PS1-3. Plan and conduct an investigation to gather evidence to compare the structure of substances at the bulk scale to infer the strength of electrical forces between particles.

HS.Chemical Reactions

Performance Expectations

HS-PS1-4. Develop a model to illustrate that the release or absorption of energy from a chemical reaction system depends upon the changes in total bond energy.

NGSS: Science and Engineering Practices

NGSS: 9-12

Practice 3. Planning and carrying out investigations

Planning and carrying out investigations in 9-12 builds on K-8 experiences and progresses to include investigations that provide evidence for and test conceptual, mathematical, physical, and empirical models.

Plan an investigation or test a design individually and collaboratively to produce data to serve as the basis for evidence as part of building and revising models, supporting explanations for phenomena, or testing solutions to problems. Consider possible confounding variables or effects and evaluate the investigation's design to ensure variables are controlled.

Select appropriate tools to collect, record, analyze, and evaluate data.

Make directional hypotheses that specify what happens to a dependent variable when an independent variable is manipulated.

Manipulate variables and collect data about a complex model of a proposed process or system to identify failure points or improve performance relative to criteria for success or other variables.

NGSS: Disciplinary Core Ideas

NGSS: 9-12

PS1: Matter and Its Interactions

PS1.A: Structure and Properties of Matter

The structure and interactions of matter at the bulk scale are determined by electrical forces within and between atoms. (HSPS1-3),(secondary to HS-PS2-6)

PS2: Motion and Stability: Forces and Interactions
PS2.B: Types of Interactions

Newton's law of universal gravitation and Coulomb's law provide the mathematical models to describe and predict the effects of gravitational and electrostatic forces between distant objects.(HS-PS2-4)

PS3: Energy
PS3.A: Definitions of Energy

At the macroscopic scale, energy manifests itself in multiple ways, such as in motion, sound, light, and thermal energy. (HSPS3-2) (HS-PS3-3)

These relationships are better understood at the microscopic scale, atwhich all of the different manifestations of energy can be modeled as either motions of particles or energy stored in fields (which mediate interactions between particles). This last concept includes radiation, a phenomenon in which energy stored in fields moves across space. (HSPS3-2)

Critical Content & Skills
What students must KNOW and be able to DO

- Determine how unequal charge distribution makes water a polar molecule.
- Explain how water molecules are attracted and held together by strong intermolecular forces called hydrogen bonds.
- Explain how the ability of water molecules to form hydrogen bonds results in such properties as high surface tension, high heat capacity, low vapor pressure, and low density as a solid.
- Distinguish between a solute, solvent and solution.
- Describe how a solution is a homogenous mixture of a solute and solvent.
- Explain how the solubility of a solute in water is dependent on the temperature and chemical nature of the solute.
- Explain why dissolving some solutes is exothermic while dissolving others is endothermic.
- Describe how aqueous solutions can be electrolytes or nonelectrolytes depending on the nature of the solute.
- Analyze solubility curves.
- Describe factors that influence the solubility of solids and gases.
- Calculate the concentration of a solution in terms of moles per liter.
- Make a solution of a specified concentration and volume and know how to perform the calculations that are involved.
- Make a dilution of a concentrated solution and know how to perform the calculations that are involved.

Core Learning Activities

- Molarity POGIL
- Molarity Calculation Practice
- Making a Molar Solution of Sucrose
- Dilutions Practice
- Potion Dilution Lab
- Saturated and Unsaturated Solution POGIL
- Solubility Chart Practice
- Factors that Affect Solubility (Rates of Solubility) Experiment
- Making a Solubility Curve (KNO_3) Lab
- Hot and Cold Pack Inquiry Lab
- Dilutions with the Spec-20 Lab

Molarity POGIL.pdf

More Molarity by Dilutions.pdf
Making a Molar solution of Sucrose.pdf
Molarity Problems 2 .pdf
Dilutions Problems .pdf
Potion Dilution Lab A.pdf
Saturated and Unsaturated Solutions POGIL.pdf
Solubility Curves Practice .pdf

Assessments

Hot and Cold Pack (Heat of Solution) Inquiry Lab
Formative: Lab Assignment
Students design and conduct an experiment to quantitatively determine the best solute to use in a water-based cold and hot pack.
Heat of Solutions Cold & Hot Pack Lab.pdf

Factors that Affect Solubility Lab
Formative: Lab Assignment
Students perform experiments to explore factors that influence the solubility of solids and gases.
Preparation of a Solubility Curve Lab .pdf

Determining Solution Concentration by Colorimetric Analysis
Formative: Lab Assignment
Students create solutions of $CuSO_4$ and use their concentrations and light absorption values to create a standardized data curve graph. This graph is used to assess the concentrations of unknown samples of $CuSO_4$.
Determining the Concentration with Colorimetry.pdf

Preparation of a Solubility Curve Lab
Formative: Lab Assignment
Students conduct an experiment to obtain the data needed to prepare a solubility curve so that the solubility of potassium nitrate can be predicted for any temperature.
Preparation of a Solubility Curve Lab .pdf

Aqueous Solutions Test
Summative: Written Test
Will include MC, short answer and calculation based questions. A test review with sample questions is included.
Aqueous Solutions Test Review .pdf

Strength of acids and bases

G Generalizations / Enduring Understandings	Guiding Questions
	Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]
1. All aqueous systems consist of small concentrations of hydrogen ions and hydroxide ions.	1a. Where do hydrogen ions and hydroxide ions come from in an aqueous system? (C)
	1b. Why does pure water have an equal concentration of hydrogen ions and hydroxide ions? (C)
2. An acid donates a hydrogen ion to base.	

3. A base accepts a hydrogen ion from an acid.	2a. What behavior defines an acid? (F)
	2b. What are the properties of an acid? (F)
4. An acid neutralizes a base and vice versa.	2c. Do all substances that contain hydrogen behave as acids? (P)
5. Changes in the balance between hydrogen ions and hydroxide ions manipulates the pH of a solution.	3a. What behavior defines a base? (F)
	3b. What are the properties of a base? (F)
6. Strong acids and bases ionize completely while weak acids and bases ionize partially.	3c. Does a substance require hydroxide ions to behave as a base? (P)
	4a. What is the outcome of an acid-base neutralization? (C)
	4b. How are the stoichiometric amounts of acid and base needed for neutralization calculated? (C)
	4c. How is a neutralized solution identified? (C)
	5a. What is the pH of pure water? (F)
	5b. Does in increase in hydrogen ion concentration increase or decrease the pH? (F)
	5c. How is pH calculated from the concentration of hydrogen ions or hydroxide ions? (C)
	5d. Is the pH of a neutralized solution always the same? (P)
	6a. What defines a strong acid/base? (F)
	6b. What defines a weak acid/base? (F)
	6c. Why do some acids/bases only ionize partially? (C)
	6d. How does the extent of ionization for an acid/base affect the pH of a solution? (C)

Standard(s)

Connecticut Core Standards / Content Standards
NGSS: Science Performance Expectations (2017)
NGSS: HS Physical Sciences

HS.Chemical Reactions
Performance Expectations

HS-PS1-2. Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, and knowledge of the patterns of chemical properties.

HS-PS1-5. Apply scientific principles and evidence to provide an explanation about the effects of changing the temperature or concentration of the reacting particles on the rate at which a reaction occurs.

HS-PS1-7. Use mathematical representations to support the claim that atoms, and therefore mass, are conserved during a chemical reaction.

NGSS: Science and Engineering Practices
NGSS: 9-12

Practice 4. Analyzing and interpreting data
Analyzing data in 9–12 builds on K–8 experiences and progresses to introducing more detailed statistical analysis, the comparison of data sets for consistency, and the use of models to generate and analyze data.

Analyze data using tools, technologies, and/or models (e.g., computational, mathematical) in order to make valid and reliable scientific claims or determine an optimal design solution.

Practice 5. Using mathematics and computational thinking
Mathematical and computational thinking in 9-12 builds on K-8 experiences and progresses to using algebraic thinking and analysis, a range of linear and nonlinear functions including trigonometric functions, exponentials and logarithms, and computational tools for statistical analysis to analyze, represent, and model data. Simple computational simulations are created and used based on mathematical models of basic assumptions.

Use mathematical, computational, and/or algorithmic representations of phenomena or design solutions to describe and/or support claims and/or explanations.

Apply techniques of algebra and functions to represent and solve scientific and engineering problems.

Apply ratios, rates, percentages, and unit conversions in the context of complicated measurement problems involving quantities with derived or compound units (such as mg/mL, kg/m3, acre-feet, etc.).

Access the interactive version of the NGSS here

Critical Content & Skills
*What students must **KNOW and be able to DO***

- Describe the properties of acids and bases.
- Identify Arrhenius acids and bases.
- Identify Brønsted-Lowry acids and bases.
- Construct Brønsted-Lowry conjugate acid-base pairs.
- Describe the relationship between H^+ concentrations [H+] and OH^- concentrations [OH-] in aqueous solutions.
- Calculate the pH, pOH, [H+] and [OH-] of aqueous solutions.
- Predict the products of neutralization reactions.
- Write balanced chemical equations for a neutralization reactions.
- Use an indicator to identify pH values, changes in pH, or the end point of neutralization reactions.
- Analyze a titration curve.
- Calculate the concentration of an acid or base during a titration experiment.
- Calculate the molar mass of an acid during a titration experiment.
- Describe the difference in behavior between strong and weak acids and bases in aqueous solution.
- Calculate the percent dissociation of a weak acid or base.

Core Learning Activities

- Acids and Bases Comparison Chart
- pH and pOH Calculations Practice
- Predicting the Products of Neutralization Reactions
- Determining Bronsted Lowry Acid Base Pairs
- Titration Calculations Practice
- Determining the Molar Mass of a Solid Acid Lab
- Standardizing a Base lab
- pH Calculations of Various Household Items (Indicator) Lab
- Determining the Percentage of Acetic Acid in Vinegar Lab

Properties of Acids and Bases Chart.pdf
pH and pOH problems .pdf
Bronsted Lowry Acid Base Pairs.pdf
Predicting Products of Neutralization Reactions.pdf
Titrations Worksheet.pdf
Indicator Lab.pdf

Assessments

Standardizing a Base Solution
Formative: Lab Assignment
Students determine the concentration of a sodium hydroxide solution through titration. A reliable acid standard, KHP, is used.
Lab -Standardizing a solution.pdf
Determining the Molar Mass of a Solid Acid
Formative: Lab Assignment
Students analyze a sample of a solid acid with a known mass through titrations with a standardized solution of sodium hydroxide. The data is used to calculate the molar mass of the acid.
Lab -Molar mass of solid acid.pdf
Determining the Percent Acetic Acid in Vinegar Lab
Summative: Lab Assignment
Students will determine the concentration of acetic acid one brand of vinegar by titrating with a known concentration of sodium hydroxide, using phenolphthalein as an indicator. In addition, they will use the molarity of acetic acid in vinegar to calculate the percentage of acetic acid by mass in the vinegar.
Titration of Vinegar Lab .pdf
Acids and Bases Test
Summative: Written Test
Will include a combination of MC, short answer and calculation based questions. The test review provides sample questions.
Acids and Bases Test Review Complete.pdf

G Generalizations / Enduring Understandings	Guiding Questions *Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]*
1. Ideal gases obey the kinetic molecular theory.	

2. Every ideal gas particle expresses identical behavior to every other ideal gas particle.	1a. What are the tenants of kinetic molecular theory? (F)
	1b. The violation of which tenants of kinetic molecular theory cause non-ideal behavior? (C)
	1c. Is it possible for a gas to have perfectly ideal behavior? (P)
3. Equal volumes of gases at the same pressure and temperature consist of the same number of particles.	
	2a. What behaviors do ideal gases exhibit? (F)
4. The large amounts of empty space between gas particles renders them highly susceptible to compression and expansion.	2b. Why do two ideal gas particles behave identically? (C)
	3a. How do the number of gas particles impact the volume, pressure, and temperature of a gas? (F)
5. The ideal gas equation, PV = nRT, predicts the relationship between the pressure(P), volume(V), moles of particles(n), and temperature(T) of a gas.	3b. What volume does one mole of gas occupy at standard temperature and pressure? (C)
6. The mole fraction of a gas mixture determines the partial pressure of each gas.	
	4a. Why do gas particles have large amounts of empty space between them? (C)
7. The partial pressure of a gas facilitates stoichiometric calculations.	4b. What changes are necessary to compress or expand a gas? (C)
	4c. Is there a limit to how much a gas can be compressed? (P)
	5a. How are temperature and pressure related? (C)
	5b. How are temperature and volume related? (C)
	5c. How are pressure and volume related? (C)
	5d. How are moles of gas particles and volume related? (C)
	5e. How can the ideal gas constant, R, be experimentally determined? (C)
	5f. Which part(s) of the ideal gas equation would be affected by non-ideal behavior? (P)
	6a. How is the mole fraction calculated? (F)
	6b. Why does the mole fraction directly relate to a gas's

	partial pressure? (C)
	6c. Why do the partial pressure of a gaseous mixture add up to the total pressure of the mixture? (C)
	7a. How can the partial pressure of a gas be related to moles of the gas? (C)
	7b. Can changes in the overall pressure of a system be determined as a chemical reaction proceeds? (P)

Standard(s)

Connecticut Core Standards / Content Standards

NGSS: Science Performance Expectations (2017)

NGSS: HS Physical Sciences

HS.Structure and Properties of Matter
Performance Expectations

HS-PS1-3. Plan and conduct an investigation to gather evidence to compare the structure of substances at the bulk scale to infer the strength of electrical forces between particles.

HS.Forces and Interactions
Performance Expectations

HS-PS2-4. Use mathematical representations of Newton's Law of Gravitation and Coulomb's Law to describe and predict the gravitational and electrostatic forces between objects.

HS.Energy
Performance Expectations

HS-PS3-2. Develop and use models to illustrate that energy at the macroscopic scale can be accounted for as a combination of energy associated with the motions of particles (objects) and energy associated with the relative positions of particles (objects).

HS-PS3-4. Plan and conduct an investigation to provide evidence that the transfer of thermal energy when two components of different temperature are combined within a closed system results in a more uniform energy distribution among the components in the system (second law of thermodynamics).

HS-PS3-5. Develop and use a model of two objects interacting through electric or magnetic fields to illustrate the forces between objects and the changes in energy of the objects due to the interaction.

NGSS: Science and Engineering Practices
NGSS: 9-12

Practice 4. Analyzing and interpreting data
Analyzing data in 9–12 builds on K–8 experiences and progresses to introducing more detailed statistical analysis, the comparison of data sets for consistency, and the use of models to generate and analyze data.

Analyze data using tools, technologies, and/or models (e.g., computational, mathematical) in order to make valid and

reliable scientific claims or determine an optimal design solution.

Analyze data to identify design features or characteristics of the components of a proposed process or system to optimize it relative to criteria for success.

Practice 5. Using mathematics and computational thinking

Mathematical and computational thinking in 9-12 builds on K-8 experiences and progresses to using algebraic thinking and analysis, a range of linear and nonlinear functions including trigonometric functions, exponentials and logarithms, and computational tools for statistical analysis to analyze, represent, and model data. Simple computational simulations are created and used based on mathematical models of basic assumptions.

Create and/or revise a computational model or simulation of a phenomenon, designed device, process, or system.

Use mathematical, computational, and/or algorithmic representations of phenomena or design solutions to describe and/or support claims and/or explanations.

Apply techniques of algebra and functions to represent and solve scientific and engineering problems.

Apply ratios, rates, percentages, and unit conversions in the context of complicated measurement problems involving quantities with derived or compound units (such as mg/mL, kg/m3, acre-feet, etc.).

NGSS: Disciplinary Core Ideas

NGSS: 9-12

PS3: Energy

PS3.B: Conservation of Energy and Energy Transfer

Mathematical expressions, which quantify how the stored energy in a system depends on its configuration (e.g. relative positions of charged particles, compression of a spring) and how kinetic energy depends on mass and speed, allow the concept of conservation of energy to be used to predict and describe system behavior. (HS-PS3-1)

Access the interactive version of the NGSS here

Critical Content & Skills
*What students must **KNOW and be able to DO***

- Describe how ideal gases behave according to the Kinetic molecular theory,
- Explain the difference between real and ideal gases behavior and identify the conditions under which their behaviors diverge.
- Convert between Celsius and Kelvin temperature scales.
- Convert between different units of pressure.
- Calculate the partial pressure of a gas.
- Calculate the total pressure of gases in a system using the partial pressure of each gas.
- Explain how volume, pressure, temperature, and the quantity of gas particles are related using the gas laws.
- Calculate a change in volume, pressure, or temperature using the combined gas law.
- Calculate the volume, pressure, temperature, molar mass, density, or quantity of gas particles using the ideal gas equation.
- Use Graham's Law to explain the relative effusion and diffusion rates of gases at the same temperature.

Core Learning Activities

Practice with Temperature and Pressure Conversions

Gas Laws Practice Calculations

Boyle's Law Lab

Determining the Molar Mass of an Unknown Gas Lab

Determining the Ideal Gas Constant (Ideal Gas Law) Lab

Crush the Can Activity (Charles's Law)

Extrapolating the Value of Absolute Zero (Gay Lussac) Lab
KMT and Diffusion -Graham's Law Lab

Gas Laws Temp & Pressure Conversions Practice.pdf
Ideal Dalton Graham Gas Laws Practice.pdf
Boyle Charles GayLussac Combined Gas Law Practice.pdf
KMT Diffusion w Grahams Law BTB Activity.pdf
Crush the Can.pdf
Absolute Zero Lab.pdf

Assessments

Boyle's Law Lab
Formative: Lab Assignment
Students perform an experiment to discover the relationship between the pressure and the volume of a gas and to review the terminology of experimentation such as hypothesis, independent variable, dependent variable and control.
Boyle's Law Lab.pdf
Determining the Ideal Gas Law Constant Lab
Formative: Lab Assignment
Students experimentally determine the value of R, the universal gas constant, using knowledge of stoichiometry and gas laws.
Determining the Ideal Gas Constant Lab.pdf
Air Bag Lab
Formative: Lab Assignment
Students use their knowledge of stoichiometry and gas laws and perform calculation with the goal of inflating a ziplock bag with the optimal amount of carbon dioxide.
Air Bag Lab.pdf
Determining the Molar Mass of an Unknown Gas Lab
Formative: Lab Assignment
Students will perform an experiment and use knowledge of multiple gas laws in order to determine identity of an unknown gas by calculating it's molar mass.
Determining the Molar Mass of an Unknown Gas Lab.pdf
Gas Laws Test
Summative: Written Test
A combination of MC, short answer and calculation based questions. Sample questions are included in the test review.
Gas Laws Test Review .pdf

G Generalizations / Enduring Understandings	Guiding Questions *Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]*
1. Carbon-based compounds compose all known life.	1a. What element are organic molecules primarily composed of? (F)
2. Carbon atoms form complex molecules that promote diversity in form and function.	1b. What other elements are commonly found in organic molecules? (F)

3. Functional groups dictate the properties of organic molecules.

4. Some organic molecules, such as proteins, lipids, carbohydrates and nucleic acids provide important structures and functions in living organisms.

5. Repeating chains of monomers construct polymers.

6. Polymers form many modern materials, including plastics.

2a. What type of chemical bonding exists in organic molecules? (F)

2b. Why is carbon able to create a wide variety of molecules? (C)

2c. What is the simplest organic molecule? (F)

2d. Is there a limit to the number of different organic molecules that could exist? (P)

3a. What are the primary functional groups? (F)

3b. What are some functional groups contained in common substances? (C)

3c. Do all functional groups serve a purpose? (P)

4a. What is a protein? (F)

4b. What is a carbohydrate? (F)

4c. What is a lipid? (F)

4d. What is a nucleic acid? (F)

4e. What role do the four categories of macromolecules play in biological systems? (C)

4f. Are any organic molecules harmful to biological systems? (C)

5a. What is a monomer? (F)

5b. What is a polymer? (F)

5c. How are monomers used to create polymers? (C)

5d. Can a polymer be composed of different monomers? (P)

5e. How are the properties of a monomer and a polymer the same? How are they different? (C)

6a. What are some types of plastics? (F)

	6b. What are plastics used for? (F)
	6c. Do the benefits of using plastics outweigh the risks? (P)

Standard(s)

Connecticut Core Standards / Content Standards

NGSS: Science Performance Expectations (2017)

NGSS: HS Physical Sciences

HS.Structure and Properties of Matter

Performance Expectations

HS-PS1-1. Use the periodic table as a model to predict the relative properties of elements based on the patterns of electrons in the outermost energy level of atoms.

HS-PS1-3. Plan and conduct an investigation to gather evidence to compare the structure of substances at the bulk scale to infer the strength of electrical forces between particles.

HS.Chemical Reactions

Performance Expectations

HS-PS1-2. Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, and knowledge of the patterns of chemical properties.

HS-PS1-4. Develop a model to illustrate that the release or absorption of energy from a chemical reaction system depends upon the changes in total bond energy.

NGSS: Science and Engineering Practices

NGSS: 9-12

Practice 3. Planning and carrying out investigations

Planning and carrying out investigations in 9-12 builds on K-8 experiences and progresses to include investigations that provide evidence for and test conceptual, mathematical, physical, and empirical models.

Plan an investigation or test a design individually and collaboratively to produce data to serve as the basis for evidence as part of building and revising models, supporting explanations for phenomena, or testing solutions to problems. Consider possible confounding variables or effects and evaluate the investigation's design to ensure variables are controlled.

Critical Content & Skills

What students must KNOW and be able to DO

- Name organic compounds using the IUPAC system.
- Draw simple organic molecules.
- Identify saturated and unsaturated hydrocarbons.
- Determine the functional groups present in an organic molecule and their properties.
- Distinguish between isomers of organic compounds.
- Explain the role of organic molecules in biological systems.
- Describe the polymerization process.
- Identify the various applications of plastics in every day life.

- Analyze the benefits and risks of using plastics.

Core Learning Activities

- Naming Organic Compounds and Identifying Functional Groups Practice
- Polymer Labs (Making Shrinky Dinks, Bouncy Balls, etc)
- Organic Compound Modeling Lab
- Synthesizing Esters Lab
- Soap Lab

Hydrocarbon Naming Practice.pdf
Naming Organic Compounds Blue Book Practice.pdf
Organic Naming Practice PHS.pdf
Making Shrinky Dinks
Making Shrinky Dinks at Home
Paul's Polymer Labs
Synthetic Polymers and Plastics Lab

Assessments

Soap Lab
Formative: Lab Assignment
Students will experimentally synthesize soap, using vegetable oil as their starting material. They will then compare the properties of their soap to those of both commercial soap and commercial detergent.
Soap Lab.pdf

Synthesizing Ester Lab
Formative: Lab Assignment
Students experimentally synthesize an array of ester compounds, which are the basis of fruity scents encountered in everyday life.

Organic Modeling Lab
Formative: Lab Assignment
Students use kits to build models of a wide array of organic molecules to learn about their structures.
Organic Model Lab Guide.pdf
Organic Model Lab Chart.pdf

Organic Chemistry Test
Summative: Written Test
Includes MC and short answer questions. Sample questions can be found in the test review.
Organic Test Review.pdf

- equation of a plane

Lens: Representation

G Generalizations / Enduring Understandings	Guiding Questions *Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]*
Strand 1: Three-Dimensional Coordinate Systems Concepts:	Generalization 1:

- coordinate plane
- octants
- surface
- plane
- sphere
- cylinder
- quadric surfaces

Generalization:

1) The three-dimensional coordinate system divides space into eight octants.

2) An equation in x, y, and z represents a surface in three dimensions.

3) Three-dimensional graphs include planes, spheres, cylinders, and quadric surfaces

Strand 2: Vectors

Concepts:

- vector
- magnitude
- direction
- scalar
- scalar multiplication
- vector addition
- zero vector
- unit vector
- standard basis vector

Generalization:

4) *A vector is used to indicate a quantity that has both magnitude and direction.*
5) *Scalar multiplication and vector addition are operations performed on vectors and scalars.*

6) The zero vector, unit vector, and standard basis vectors are the most basic form of a vector.

Strand 3: The Dot Product

Concepts:

- dot product
- orthogonal
- scalar projection
- vector projection

What are octants? (F)

Generalization 2:

How can two-dimensional curves be extended to three-dimensional surfaces?(C)

Generalization 3:

What are the traces of a surface? How is this found? (C)

Where are quadratic surfaces seen in the real world? (P)

What is the equivalent of using traces to draw surfaces in two dimensions? (P)

How is perspective used to represent three-dimensional objects in two-dimensional planes? (P)

Generalization 4:

What is the formula for finding the displacement vector? (F)

Generalization 5:

What is the difference between a vector and a scalar? (F)

How are two vectors added geometrically?(C)

How are two vectors added algebraically? (C)

If **a** is a vector and c is a scalar, how is ca related to **a** geometrically? (C)

If **a** is a vector and c is a scalar, how is ca found algebraically? (C)

How are two vectors added geometrically?(C)

Generalization 6:

How is the dot product **a** · **b** of two vectors found if their lengths and the angle between them are known? What if

Generalization:

7) The dot product of two vectors results in a scalar quantity.

8) Orthogonal vectors dot product evaluates to zero.

9) The scalar and vector projections of one vector onto another require the dot product.

Strand 4: The Cross product

Concepts:

- cross product
- determinant

Generalizations:

10) Calculating the determinant of the two vectors and the standard basis vectors creates a cross-product of two vectors.

Strand 5: Equations of Lines and Planes

Concepts:

- vector equation
- plane
- normal vector
- equation of a plane

Generalizations:

11) A vector equation represents a line in the three-dimensional coordinate plane.

12) An equation of a plane is determined by a point in the plane and the vector orthogonal to the plane called the normal vector.

their components are known? (F)

Generalization 7:

How are dot products useful? (P)

Generalization 8:

How are expressions written for scalar and vector projections of **b** onto **a**? (F)

When are two vectors perpendicular? (C)

Generalization 9:

When are two vectors parallel? (S3)

Generalization 10:

How is the cross product **a** × **b** of two vectors found if their lengths and the angle between them are known? What if their components are known? (F)

How is the area of a parallelogram determined by **a** and **b** found? (F)

How is the volume of a parallelepiped determined by **a**, **b**, and **c** found? (F)

How are cross-products useful? (P)

Generalization 11:

How are vector equations, parametric equations, and symmetric equations for a line written?(C)

How is the distance from a point to a line found? (C)

How is the distance between two lines found? (C)

Generalization 12:

	How is a vector perpendicular to a plane found? (C)
	How is the angle between two intersecting planes found? (C)
	When are two planes parallel? (C)
	How is a vector equation and a scalar equation for a plane found? (C)
	How is the distance from a point to a plane found? (C)

Standard(s)
Connecticut Core Standards / Content Standards

Critical Content & Skills
*What students must **KNOW** and be able to **DO***

Students must be able to:

- Use the three dimensional coordinate system.
- Apply properties of vectors.
- Apply the dot product to multiple vectors.
- Apply the cross product to multiple vectors.
- Describe lines and planes in three dimensions.

Core Learning Activities

In this unit, students will be given the opportunity to work collaboratively and independently.

Use the three dimensional coordinate system.

- Identify equations that represents a plane, spherical, cylindrical, and quadric surface.
- Write inequalities to describe a region.

Apply properties of vectors.

- Find a vector with representation specified by given line segments.
- Draw equivalent representations of vectors starting at the origin.
- Find the sum of vectors.
- Find vectors of the same direction.

Apply the dot product to multiple vectors.

- Find $\mathbf{a} \cdot \mathbf{b}$.
- Determine if vectors are orthogonal, parallel, or neither.
- Find direction cosines and direction angles of vectors.
- Find scalar and vector projections of vectors.

Apply the cross product to multiple vectors.

- Find the cross product of two vectors and verify that it is orthogonal to both.
- Find a vector, not with determinants, but by using properties of cross products.
- Find the magnitude of the cross product.
- Find nonzero vectors orthogonal to a plane through three given points.
- Find the volume of a parallelepiped.

Describe lines and planes in three dimension

- Find vector and parametric equations for a line.
- Find parametric and symmetric equations for a line.
- Determine whether lines are parallel, skew, or intersecting.
- Find the equation of a plane.
- Use intercepts to sketch a plane.
- Find the point at which a line intersects a plane.
- Determine whether planes are parallel, perpendicular, or neither.
- Find the angle between planes.
- Find parametric and symmetric equations for the line of intersection of planes.
- Find the distance from a point to a given line.
- Find the distance between parallel planes.
- Describe a method for determining whether three points P, Q, and R lie on the same line.
- Describe a method for determining whether four points P, Q, R, and S lie in the same plane.

- acceleration

Lens: Functions

G
Generalizations / Enduring Understandings

Strand 1: Vector Functions and Space Curves

Concepts:

- vector-valued function
- space curve
- parametric equations
- parameter

Generalization:

1) Vector-valued functions create curves and surfaces in space.

Guiding Questions
Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]

Generalization 1:

What is a vector function? (F)

What is the connection between vector functions and space curves? (C)

When are vector-valued functions more efficient than a function of two variables? (P)

2) Parametric equations give the coordinates of all points on a space curve based on a given parameter.

Strand 2: Derivatives and Integrals of Vector Functions

Concepts:

- derivative
- tangent vector
- second derivative
- definite integral

Generalizations:

3) The derivative of **r**(t) is **r'**(t) and represents the tangent vector to the curve.

4) The methods for finding the derivative, second derivative, and definite integrals in real-valued functions can be extended to vector-valued functions.

Strand 3: Arc Length and Curvature

Concepts:

- arc length
- curvature
- Binormal vector
- normal plane

Generalizations:

5) *The length and curvature of a space curve are determined by specific formulas related to the vector-valued function.*

6) The cross-product of the unit tangent vector and the unit normal vector results in the binormal vector.

7) *The normal plane is determined by the tangent vector and the osculating plane is determined by the binormal vector.*

Strand 4: Motion in Space

Concepts:

- position vector
- velocity
- speed

Generalization 2:

How can a function of two variables be represented as a parametric equation? (C)

Generalization 3:

How is the tangent vector to a smooth curve at a point found? (C)

How is the tangent line found? (C)

How is the unit tangent vector found? (C)

Generalization 4:

How are the derivative and integral of a vector function found? (C)

Generalization 5:

What is the formula for the curvature of a plane curve with equation y = f(x)? (F)

How is the length of a space curve given by a vector function r(t) found? (C)

What is the definition of curvature? (C)

How is the curvature of a space curve determined in terms of **r'**(t) and **T'**(t)? (C)

How is the curvature of a space curve determined in terms of **r'**(t) and **r''**(t). (C)

Generalization 6:

What are the formulas for the unit normal and binormal vectors of a smooth space curve r(t)? (F)

Generalization 7:

What is the normal plane of a curve at a point? (F)

What is the osculating plane? (F)

- acceleration

Generalizations:

8) The first and second derivatives of the position vector give the velocity and acceleration vectors.

9) *Speed is a scalar quantity found by taking the magnitude of the velocity vector.*

What is the osculating circle? (F)

How can a rider on a rollercoaster be connected to the tangent, normal, and binormal vectors? (C)

Generalization 8:

How are the velocity, speed, and acceleration of a particle that moves along a space curve found? (S4)

Generalization 9:

How is speed related to velocity? (C)

How is the calculation for speed related to the Pythagorean Theorem? (C)

Standard(s)
Connecticut Core Standards / Content Standards

Critical Content & Skills
What students must **KNOW and be able to DO**

Students must be able to:

- Model vector-valued function.
- Find the derivative of vector functions.
- Find the integral of vector functions.
- Relate tangent vectors, normal vectors, and curvature to the study of the motion of an object.

Core Learning Activities

In this unit, students will be given the opportunity to work collaboratively and independently.

Model vector-valued function.

- Find the domain of vector functions.
- Sketch the curve of a vector equation.
- Find parametric and vector equations for line segments joining two points.
- Match parametric equations with graphical representation.

- Find vector functions that represent the curve of intersection of two surfaces.

Find the derivative of vector functions.

- Find the derivative of vector functions.
- Sketch the position of vectors and their tangent vector for given values of t.
- Find unit tangent vectors.
- Find parametric equations for tangent lines to a curve.
- Use differentiation to find curvature.
- Write the rules for differentiating composite vector functions.

Find the integral of vector functions.

- Evaluate integrals of vector functions.
- Use integration of vectors to find the length of a curve.
- Reparametrize curves with respect to arc length measured from a point.

Relate tangent vectors, normal vectors, and curvature to the study of the motion of an object.

- Find the velocity, acceleration, and speed of a particle with a given position function.
- Find the velocity and position vectors of a particle given its acceleration, initial velocity, and initial position.
- Find the tangential and normal components of an acceleration vector.
- State Kepler's Laws.

Concept: Functions of Several Variables

- independent variable
- dependent variable
- function of two variables
- level curve
- function of n variables
- limit
- continuity
- partial derivative
- second order partial derivatives
- tangent plane
- linear approximation
- differential
- chain rule
- implicit differentiation
- directional derivative
- gradient vector
- tangent plane to the level surface
- critical point
- local minimum
- local maximum
- absolute maximum
- absolute minimum
- extreme value theorem
- second derivative test
- saddle point
- Lagrange multipliers

Lens: Function

G Generalizations / Enduring Understandings	Guiding Questions *Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]*
Strand 1: Functions of Several Variables Concepts:	Generalization 1:

- independent variable
- dependent variable
- function of two variables
- level curve
- function of n variables

Generalization:

1)* A function of two variables is a rule that assigns each ordered pair of independent variables (x,y) a dependent variable z.*

2) *The level curve of a function is the set of all points (x,y) at which the function takes on a certain value.*

3)* A function of n variables is a function rule with a set of n-tuple independent variables.*

Strand 2: Limits and Continuity

Concepts:

- limit
- continuity

Generalization:

4) The definitions of limits and continuity for multivariable functions follow from those of their single-variable counterparts.

Strand 3: Partial Derivatives

Concepts:

- partial derivative
- second order partial derivatives

Generalization:

5) *A partial derivative of a function of several variables is the derivative with respect to one of those variables, with the others held constant.*

6) *A second-order partial derivative is the derivative of the first-order partial derivative.*

Strand 4: Tangent Planes and Linear Approximations

Concepts:

- tangent plane
- linear approximation

What is a function of two variables? (F)

What is a function of three variables? (F)

How can a function of three variables be visualized? (C)

Generalization 2:

What are the three methods for visualizing a function of two variables? (F)

Generalization 3:

How can the concepts of a function of two variables be extended to a function of n-variables? (C)

Generalization 4:

What does it mean to say that f is continuous at (a, b)? (C)

If f is continuous on $\mathbb{R}^2$, what can be said about its graph? (C)

Generalization 5:

If $f(x, y)$ is given by a formula, how do you calculate f_x and f_y? (F)

How can expressions for the partial derivatives $f_x(a, b)$ and $f_y(a, b)$ as limits be written? (C)

How can $f_x(a, b)$ and $f_y(a, b)$ be interpreted geometrically? (C)

How can $f_x(a, b)$ and $f_y(a, b)$ be interpreted as rates of change? (C)

What does it mean to say that f is differentiable at (a, b)? (C)

How is differentiability verified? (C)

Generalization 6:

- differential

Generalizations:

7) The tangent plane to a surface at a point P provides a linear approximation of the function at that point.

8) A differential of a function represents a change in the linearization of the function with respect to one or more variables.

Strand 5: The Chain Rule

Concepts:

- chain rule
- implicit differentiation

Generalizations:

9) *The chain rule and implicit differentiation are techniques used to easily differentiate otherwise difficult equations.*

Strand 6: Directional Derivatives and the Gradient Vector

Concepts:

- directional derivative
- gradient vector
- tangent plane to the level surface

Generalizations:

10) *The gradient vector is a vector function whose components are the directional derivatives with respect to x and y.*

11) *The tangent plane to the level surface is a plane defined using the gradient as the normal vector.*

Strand 7: Maximum and Minimum Values

Concepts:

- critical point
- local minimum
- local maximum
- absolute maximum
- absolute minimum

What does Clairaut's Theorem say? (F)

Generalization 7:

What is the linearization of some function f at (a, b)? (F)

What is the linear approximation of some function f at (a, b)? (F)

What is the geometric interpretation of a linear approximation? (F)

Generalization 8:

If $z = f(x, y)$, what are the differentials dx, dy, and dz? (F)

Generalization 9:

What is the Chain Rule for the case where $z = f(x, y)$ and x and y are functions of one variable? (F)

What is the Chain Rule for the case where $z=f(x,y)$ and x and y are functions of two variables? (F)

If z is defined implicitly as a function of x and y by an equation of the form $F(x, y, z) = 0$, how is dz/dx and dz/dy found? (F)

Generalization 10:

What is the gradient vector for a function f of two or three variables? (F)

How is a limit for the directional derivative or r at (x_0, y_0) in the direction of a unit vector $u \le a, b>$ interpreted as a rate? (C)

Is there a geometric significance of the gradient? (P)

Generalization 11:

How is a tangent plane to a graph of a function of two variables, $z = f(x,y)$ found? (C)

Generalization 12:

- extreme value theorem
- second derivative test
- saddle point

Generalizations:

12) *Local minimum and local maximum values are located at critical points where one or both partial derivatives are either equal to zero or undefined.*

13) *The extreme value theorem guarantees there is at least one absolute minimum and one absolute maximum value on a closed set.*

14) *The second derivative test is a method for determining whether a critical point is a local minimum, maximum, or saddle point.*

Strand 8: Lagrange Multipliers

Concepts:

- Lagrange multipliers

Generalizations:

15) Lagrange multipliers are an alternative method for locating critical points5

What is a critical point of a function f? (F)

What does it mean for a function f to have a local maximum at (a, b)? (F)

What does it mean for a function f to have an absolute maximum at (a, b)? (F)

What does it mean for a function f to have a local minimum at (a, b)? (F)

What does it mean for a function f to have a saddle point at (a, b)? (F)

If f has a local maximum at (a, b), what can be said about its partial derivatives at (a, b)? (C)

Generalization 13:

What does it mean for a function f to have an absolute minimum at (a, b)? (F)

What is a closed set in $\mathbb{R}^2$? What is a bounded set? (F)

What is the Extreme Value Theorem for functions of two variables.?(F)

How are the values that the Extreme Value Theorem guarantees found? (C)

Generalization 14:

What is the Second Derivative's Test? (F)

Generalization 15:

How do the graphs of the space curve and constraint curve connect to calculating Lagrange Multipliers? (C)

Standard(s)
Connecticut Core Standards / Content Standards

Critical Content & Skills
*What students must **KNOW and be able to DO***

Students must be able to:

- Model functions of several variables.
- Evaluate limits.
- Find partial derivatives.
- Use the equations of tangent planes for linear approximations.
- Apply the chain rule.
- Find the gradient vector and directional derivatives of functions.
- Identify critical points.
- Use Lagrange multipliers.

Core Learning Activities

In this unit, students will be given the opportunity to work collaboratively and independently.

Model functions of several variables.

- Find and sketch the domain of a given function.
- Sketch the graph given a function.
- Use contour maps to make a rough sketch of the graph of a given function.
- Draw a contour map of a function.
- Sketch both a contour map and a graph of a function.
- Describe level surfaces of a function.

Evaluate limits.

- Find the limit of a function, if it exists, or show that it does not exist.
- Determine the set of points at which a function is continuous.
- Use polar coordinates to find a limit.

Find partial derivatives.

- Determine the signs of the partial derivatives for a given function.
- Identify surfaces of a function and its partial derivative.
- Find partial derivatives with respect to different variables.
- Find the first partial derivatives of a function.

- Use implicit differentiation to find second partial derivatives.
- Verify Clairaut's Theorem.

Use the equations of tangent planes for linear approximations.

- Find the equation of the tangent plane to a given surface at a specified point.
- Graph a surface and its tangent plane at any given point.
- Explain why a function is differentiable at a given point and find the linearization of the function at that point.
- Find the differential of a function.
- Show that a function is differentiable.

Apply the chain rule.

- Use the chain rule to differentiate composite functions.
- Use the chain rule to find partial derivatives.
- Prove the Implicit Function Theorem.

Find the gradient vector and directional derivatives of functions.

- Find directional derivatives of a function at a given point in a direction indicated by an angle.
- Find the gradient of a function.
- Evaluate the gradient of a function at a point.
- Find the rate of change of a function at a point in the direction of a given vector.
- Find the directional derivative of a function at a given point in the direction of a given vector.
- Find the maximum rate of change of a function at a given point and the direction in which it occurs.
- Find equations of tangent planes and normal lines to a given surface at a specified point.

Identify critical points.

- Use level curves to predict the location of the critical points of a function.
- Use the Second Derivative Test to confirm the existence of critical points.
- Find local extrema and saddle point(s) of a function.
- Show that functions can have an infinite number of critical points.
- Use a graph and/or level curves to estimate local extrema and saddle points of a function.
- Find the absolute extrema of a function on a set.

Use Lagrange Multipliers.

- Use Lagrange multipliers to find relative extrema values of a function and a given constraint.
- Use Lagrange multipliers to give alternate solutions to exercises.

Strand 1: Double Integrals

Concepts:

- volume
- double integral
- double Reimann sum
- average value
- iterated integral
- Fundamental Theorem of Calculus

Generalizations:

1) *A double Reimann sum is used to approximate a double integral which represents the volume under a

Guiding Questions

Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]

Generalization 1:

What does the double Reimann sum of a function represent? (F)

What is the definition of the double integral of $f(x,y)$ as a limit? (F)

What is the geometric interpretation of a double integral of $f(x,y)$ if $f(x,y) \geq 0$? What if f takes on both positive and negative values? (F)

What does the Midpoint Rule for double integrals say? (F)

surface and above a rectangular region in the *xy*-plane.*

2) *The average value of a function of two variables is found by dividing the volume by the area of the region in the xy-plane.*

3) The Fundamental Theorem of Calculus provides a method for calculating the exact volume under a surface using iterated integrals.

Strand 2: Triple Integrals

Concepts:

- triple Reimann sum
- triple integral
- polar coordinates
- spherical coordinates

Generalizations:

4) *Triple Reimann sums and triple integration are extensions of double integration for functions of three variables.*

5) *Iterated integration is performed in different coordinate systems such as polar coordinates and spherical coordinates.*

Strand 3: Change of Variables in Multiple Integrals

Concepts:

- transformation
- determinant
- Jacobian
- change of variables

Generalizations:

6) *The Jacobian of a transformation is defined to be the determinant resulting from the cross-product of the transformation vectors.*

7) *Change of variables in a double integral is an extension of substitution for one variable functions.*

What are type I and type 2 region for double integrals? (F)

How is the double integral of $f(x,y)$ evaluated in a type I region? (C)

How is the double integral of $f(x,y)$ evaluated in a type II region? (C)

What are the properties of double integrals? (F)

How is the double integral of $f(x,y)$ evaluated? (C)

Generalization 2:

How can an expression for the average value of f be written? (C)

Generalization 3:

What is the significance of changing rectangular coordinates to polar coordinates? (F)

How are rectangular coordinates changed to polar coordinates in a double integral? (C)

How is the double integral of $f(x,y)$ defined if the bounded region is not a rectangle? (C)

Generalization 4:

What is the definition of the triple integral of f over a rectangular box B? (F)

What is the definition of the triple integral of $f(x,y,z)$ if the bounded solid region is not a box? (F)

What is a type I, type 2, and type 3 solid region for triple integrals? (F)

If a double integral calculates the volume of a region, what does a triple integral calculate? (P)

What is the next dimension? (P)

Generalization 5:

When is it appropriate to change from rectangular

coordinates to cylindrical or spherical coordinates? (F)

If a transformation *T* is given by $x=g(u,v)$, $y=h(u,v)$, what is the Jacobian of *T*? *(F)*

How is the triple integral of $f(x,y,z)$ evaluated? (C)

How is the triple integral of $f(x,y,z)$ evaluated in type 1, type 2, and type 3 solid region? (C)

How are rectangular coordinates changed to cylindrical coordinates in a triple integral? (C)

How are rectangular coordinates changed to spherical coordinates in a triple integral? (C)

Generalization 6:

How can an intuitive approach be used to create the jacobian for a transformation from rectangular to polar coordinates? (C)

How does the region of integration change when a transformation is created? (C)

Generalization 7:

How is the change of variables for a function of one variable and a function of many variables different? (F)

How are double integrals used to change variables? (C)

How are triple integrals used to change variables? (C)

Standard(s)
Connecticut Core Standards / Content Standards

Critical Content & Skills
*What students must **KNOW** and be able to **DO***

Students must be able to:

- Evaluate double integrals.
- Evaluate triple integrals.
- Use double and triple integrals to change variables.

Core Learning Activities

In this unit, students will be given the opportunity to work collaboratively and independently.

Evaluate double integrals.

- Estimate the volume of solids that lie below a surface and above a rectangular region.
- Evaluate a double integral by first identifying it as the volume of a solid.
- Calculate iterated integrals.
- Calculate double integrals.
- Sketch a solid whose volume is given by an iterated integral.
- Find the average value of a function over a given rectangle.
- Evaluate double integrals.
- Find the volume of a given solid.
- Sketch a region of integration and change the order of integration.
- Evaluate integrals be reversing the order of integration.
- Evaluate integrals by changing to polar coordinates.
- Use a double integral to find the area of a region.
- Use polar coordinates to find the volume of a given solid.
- Evaluate iterated integrals by converting to polar coordinates.
- Find the mass and center of mass of a lamina that occupies a given region with a given density function.
- Find moments of inertia and radii of gyration.

Evaluate triple integrals.

- Evaluate triple integrals.
- Evaluate iterated integrals.
- Use triple integrals to find the volume of solids.
- Uses the Midpoint Rule for triple integrals to estimate the value of integrals.
- Sketch a solid whose volume is given by given iterated integrals.
- Evaluate integral expressions for the mass, the center of mass, and the moment of inertia about the z-axis.
- Plot cylindrical and spherical coordinates.
- Convert rectangular coordinates to cylindrical and spherical coordinates and vice versa.
- Write rectangular equations in spherical and cylindrical coordinates.
- Evaluate integrals by changing to spherical and cylindrical coordinates.

Use double and triple integrals to change variables.

- Find the Jacobian of transformations.
- Find the image set under given transformations.
- Use transformations to evaluate integrals.
- Evaluate integrals by making the appropriate change of variables.

2) *A gradient vector of a function at a point is part of a larger gradient vector field.*

3) *Curl and Divergence are two operations performed

Guiding Questions
Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]

Generalization 1:

What is a vector field? (F)

What are three examples of vector fields that have a physical meaning? (F)

What is a conservative vector field? (F)

What is a potential function? (F)

What does it mean to say that the integral of a vector field is independent of the path? (C)

on vector fields that are useful in applications of vector calculus.*

Strand 2: Line Integrals

Concepts:

- line integral
- Fundamental Theorem of Line Integrals
- Green's Theorem

Generalizations:

4) A line integral is an extension of the single integral process applied over a curve.

5) The Fundamental Theorem of line integrals provides one method for evaluating the line integral of a gradient vector field using the endpoints of the curve.

6) Green's Theorem gives the relationship between a line integral around a closed curve and a double integral over the corresponding plane.

Strand 3: Parametric Surfaces and their Areas

Concepts:

- parametric surface
- surface area
- surface integral
- Stokes' Theorem
- Divergence Theorem

Generalizations:

7) Vector functions are used to describe parametric surfaces and compute their surface areas.

8) The relationship between surface integrals and surface area is an extension of the relationship between line integrals and arc length.

9) Stokes' Theorem and the Divergence Theorem are higher-dimensional versions of Green's Theorem.

Generalization 2:

Generalization 3:

What is the definition of the curl of a vector on $\mathbb{R}^3$? (F)

What is the definition of the divergence of a vector on $\mathbb{R}^3$? (F)

If **F** is a velocity field in fluid flow, what are the physical interpretations of curl **F** and div **F**? (F)

Generalization 4:

What is the definition of the line integral of a scalar function along a smooth curve with respect to arc length? (F)

What are the definitions of the line integrals along a smooth curve of a scalar function with respect to x, y, and z? (F)

What is the definition of the line integral of a vector field along a smooth curve given by a vector function? (F)

What does the line integral of a force field represent? (F)

How is the line integral of a scalar function along a smooth curve with respect to arc length evaluated? (C)

How is the expression for the mass and center of mass of a thin wire shaped like a curve if the wire has linear density function $\rho(x,y)$ written? (C)

How are the line integrals along a smooth curve of a scalar function with respect to x, y, and z evaluated? (C)

How is the expression written for the area enclosed by a curve in terms of line integrals around that curve? (C)

Generalization 5:

What is the connection between the line integral of a vector field **F** and the line integrals of the component functions P, Q, and R, if **F**=<P,Q,R>? (F)

What is the Fundamental Theorem for Line Integrals? (F)

Generalization 6:

What is Green's Theorem? (F)

If **F**=P**i**+Q**j**, what is the test to determine whether **F** is conservative? (F)

If **F** is a vector field on $\mathbb{R}^3$, what is the test to determine whether **F** is conservative? (F)

Generalization 7:

What is a parametric surface? (F)

What are the grid curves of a parametric surface? (F)

Generalization 8:

What is the area of a surface given by an equation $z=g(x,y)$? (F)

What is the definition of the surface integral of a scalar function over a surface? (F)

What is an oriented surface? (F)

What are some examples of a non-orientable surface? (F)

If a thin sheet has the shape of a surface, and the density at (x,y,z) is $\rho(x,y,z)$, what is the expression for the mass and center of mass of the sheet? (F)

What is the definition of the surface integral (or flux) of a vector field over an oriented surface with a unit normal vector? (F)

How is the expression written for the area of a parametric surface? (C)

How is the integral of a parametric surface given by a vector function $r(u,v)$ evaluated? (C)

How is the surface integral (or flux) of a vector field over an oriented surface with a unit normal vector evaluated if the surface is parametric given by a vector function $r(u,v)$? (C)

Generalization 9:

What is Stokes' Theorem? (F)

What is the Divergence Theorem? (F)

In what ways are the Fundamental Theorem for Line Integrals, Green's Theorem, Stokes' Theorem, and the Divergence Theorem similar? (P)

Standard(s)
Connecticut Core Standards / Content Standards

Critical Content & Skills
*What students must **KNOW and be able to DO***

Students must be able to:

- Use vector fields in applications of vector calculus.
- Evaluate line integrals.
- Use parametric surfaces.

Core Learning Activities

In this unit, students will be given the opportunity to work collaboratively and independently.

Use vector fields in applications of vector calculus.

- Sketch and match vector fields in $\mathbb{R}^2$.
- Match vector fields in $\mathbb{R}^3$.
- Find and sketch the gradient vector field of a function.
- Plot gradient vector fields and contour maps of a function.
- Find the curl and the divergence of a field vector.
- Determine whether or not a vector field is conservative.
- Prove vector identities, assuming that the appropriate partial derivatives exist and are continuous.

Evaluate line integrals.

- Evaluate line integrals where C is a curve.
- Evaluate a line integral of a vector field where the curve is given by a given vector function.
- Determine whether or not a vector field is a conservative vector field.
- Show that a line integral is independent of path and evaluate the integral.
- Find the work done by a force field in moving an object.
- Evaluate a line integral using Green's Theorem.

- Use Green's Theorem to evaluate the integral of a vector field.

Use parametric surfaces.

- Determine whether two points lie on a given surface.
- Identify a surface with given vector equations.
- Find parametric representations for a surface.
- Find the area of a surface.
- Evaluate surface integrals.
- Use Stokes' Theorem to evaluate the double integral of the curl of a vector field.
- Use Stokes' Theorem to evaluate the integral of a vector field.
- Verify the Divergence Theorem.
- Use the Divergence Theorem to calculate surface integrals.

Concept-Based Unit Development Graphic Organizer (Download)
Unit Web Template (Optional)

Concepts / Conceptual Lens

Please attach your completed Unit Web Template here

conceptual lens: communications

concepts: communities, systems, relationships, diversity, dialogue

G
Generalizations / Enduring Understandings

1. Health systems vary among diverse communities.

2. Communities cultivate relationships between health care provider and the individual.

3. Strong healthcare/ patient relationships validate individual diversities.

4. Communication establishes strong relationships and enables health systems to function.

5. Systems of dialogue construct strong relationships.

Guiding Questions

Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]

1. How do different systems affect how health is addressed for different community members? (F)

1. What is a health system? (F)

1. How do different health systems help or hurt individuals and/or communities? (P)

2. What are some common experiences and cultural beliefs that might prevent or inspire people to seek health care? (C)

3. How do we acknowledge and understand that respecting individual diversities build working relationships? (C)

4. Are cultural background experiences relevant to treating a patient properly within the healthcare system? (P)

4. What dialogue is essential to establish strong relationships? (F)

4. What communicative tools are needed to discuss the health care system? (F)

4. What communicative tools are required for expressing the reason for visit? (F)

5. What are the different systems of dialogue a student

can use to construct strong relationships? (F)

5. How do the different systems of dialogue strengthen patient/provider relationships? (C)

Standard(s)

Connecticut Core Standards / Content Standards

CT: World Language (2005)

CT: Advanced (9-12)

Communication

CONTENT STANDARD 1: Communication (Interpersonal Mode) How do I use another language to communicate with others?

Exchange information about current and past events, as well as aspirations in their personal lives and the lives of their friends, families and others within their community.

Participate in culturally appropriate exchanges that reflect social amenities such as expressing gratitude, extending and receiving invitations, apologizing and communicating preferences.

Discuss their personal feelings and ideas with members of the target culture in order to consider alternate viewpoints.

Employ rephrasing and circumlocution, i.e., using other words and gestures to explain words or concepts, to successfully communicate their messages.

CONTENT STANDARD 2: Communication (Interpretive Mode) How do I understand what others are trying to communicate in another language?

Understand the main ideas and relevant details of extended discussions, lectures and formal presentations on topics related to daily life and/or historical or contemporary themes in the target culture.

CONTENT STANDARD 3: Communication (Presentational Mode) How do I present information, concepts and ideas in another language in a way that is understood?

Prepare oral presentations and/or written summaries on topics of current or historical interest in the target language.

Cultures

CONTENT STANDARD 4: Cultures How do I use my understanding of culture to communicate and function appropriately in another culture?

Identify and analyze products and practices of the target culture (e.g., social, economic, legal and political), and explore the relationships between these products and practices and the perspectives of the culture.

Interact in a variety of cultural contexts that reflect both peer group and adult activities within the target culture, using the appropriate verbal and nonverbal clues.

Identify, discuss and analyze various patterns of behaviors or interactions that are typical of the target culture.

Connections

CONTENT STANDARD 5: Connections (Interdisciplinary Mode) How do I use my understanding of another language and culture to reinforce and expand my knowledge of other disciplines, and vice versa?

Use new information and perspectives gained through world language study to expand their personal knowledge and interdisciplinary connections.

Comparisons Among Languages

CONTENT STANDARD 7: Comparisons Among Languages How do I demonstrate an understanding of the similarities, differences and interactions across languages?

Evaluate the style of a communicative interaction in the target language.

Comparisons Among Cultures

CONTENT STANDARD 8: Comparisons Among Cultures How do I demonstrate an understanding of the similarities, differences and interactions across cultures?

Use new and evolving information and perspectives to demonstrate understanding of the similarities and differences across cultures.

Use new and evolving information and perspectives to identify universals of human experience across cultures and to demonstrate empathy and respect for the people(s) of other cultures.

Evaluate the effectiveness of a communicative interaction based on cultural elements.

Communities

CONTENT STANDARD 9: Communities How do I use my knowledge of language and culture to enrich my life and broaden my opportunities?

Communicate with members of the target culture and interpret information regarding topics of personal, community or world interest.

Use their target language skills and demonstrate cultural understanding while participating in career exploration, volunteer experiences, school-to-work projects or school/individual exchanges with homestay.

Critical Content & Skills
What students must KNOW and be able to DO

Students need to know:

- different health systems in different communities

- United States health system norms in the target language (such as insurance, payment, visit norms)

- differences in health systems

- interrogatives presentation 1 or 2

- the alphabet in Spanish

- months, days, year, numbers 1-31

- the present tense

- gender/number agreement

- common experiences that the Latinx population may affect their expectations and feelings towards the health care system such as familial relationships, religious practices, home remedies,

- how to use subject pronouns and greet their patient
- the vocabulary associated with medical office etiquette
- the vocabulary associated with the health care system.

- the vocabulary expressing the reason for visit (human body, common illnesses)

- the vocabulary to support a native Spanish speaker with filling out necessary forms for entrance into a medical facility

- how to use other words and gestures to explain words or concepts to successfully communicate their messages.

Core Learning Activities

Formative:

- practice dialogues with peers in class

- Peardeck - vocabulary practice 1 - Reason for visits and common ailments

- Peardeck circumlocution practice 2 - Reason for visits and common ailments

- listening practices of dialogues

- reading of patient scenarios

- practice medical forms- diálogo

- conjuguemos practice

- describe and identify the United States health system norms in the target language (such as insurance, payment, visit norms)

- debate how different health systems help or hurt individuals and/or communities.
- - read and analyze information about patient/medical staff relationships with culture to be able to participate in culturally appropriate exchanges
- participate in culturally appropriate exchanges that reflect social amenities such as expressing gratitude, extending and receiving invitations, apologizing and communicating preferences.
- identify and analyze some common experiences that the Latinx population may affect their expectations and feelings towards the health care system and discuss (PEARDECK HERE) (article on same pages as cultural nuances/relationships).

Summative:

- presentation on different health systems in different communities

- demonstrate a mastery of vocabulary associated with health care

- dialogue with Spanish speaking patient about their reason for visiting and filling out a form accurately

conceptual lens: communication

concepts: health, care, fluency, examination, habits, communities

G Generalizations / Enduring Understandings	Guiding Questions
1. Examination of a patient facilitates care. 2. Fluency in communication ensures proper health care of the patient. 3. Examination of the patient helps to assess health concerns and administer proper care. 4. Fluency obtains information to investigate habits and health of a patient. 5. Communities procure habits that influence health.	*Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]* 1. How does one communicate the steps of a physical examination to facilitate care? (C) 1. What is the language needed to communicate the steps of an examination? (F) 2. How can fluency in communication enhance the patient health care? (C) 3. How can one validate the community and culture of the patient through the examination process? (C) 3. How can you reconcile personal beliefs with regulated healthcare practices? (C) 4. What does one need to know to assess patient history? (F) 5. Do communities positively or negatively shape individual health? (P) 5. Does knowledge of the community and culture bring about proper health care? (P)

Standard(s)

Connecticut Core Standards / Content Standards

CT: World Language (2005)
CT: Advanced (9-12)

Communication
CONTENT STANDARD 1: Communication (Interpersonal Mode) How do I use another language to

Exchange information about current and past events, as well as aspirations in their personal lives and the lives of their friends, families and others within their community.

Participate in culturally appropriate exchanges that reflect social amenities such as expressing gratitude, extending and receiving invitations, apologizing and communicating preferences.

Exchange opinions on a variety of topics, including issues of contemporary or historical interest in the target and their native cultures.

Discuss their personal feelings and ideas with members of the target culture in order to consider alternate viewpoints.

Employ rephrasing and circumlocution, i.e., using other words and gestures to explain words or concepts, to successfully communicate their messages.

CONTENT STANDARD 2: Communication (Interpretive Mode) How do I understand what others are trying to communicate in another language?

Understand the main ideas and relevant details of extended discussions, lectures and formal presentations on topics related to daily life and/or historical or contemporary themes in the target culture.

Cultures

CONTENT STANDARD 4: Cultures How do I use my understanding of culture to communicate and function appropriately in another culture?

Identify and analyze products and practices of the target culture (e.g., social, economic, legal and political), and explore the relationships between these products and practices and the perspectives of the culture.

Interact in a variety of cultural contexts that reflect both peer group and adult activities within the target culture, using the appropriate verbal and nonverbal clues.

Identify, discuss and analyze various patterns of behaviors or interactions that are typical of the target culture.

Identify, discuss, analyze and evaluate themes, ideas and perspectives that are related to the target culture.

Connections

CONTENT STANDARD 5: Connections (Interdisciplinary Mode) How do I use my understanding of another language and culture to reinforce and expand my knowledge of other disciplines, and vice versa?

Use new information and perspectives gained through world language study to expand their personal knowledge and interdisciplinary connections.

Comparisons Among Languages

CONTENT STANDARD 7: Comparisons Among Languages How do I demonstrate an understanding of the similarities, differences and interactions across languages?

Evaluate the style of a communicative interaction in the target language.

Cite evidence to support conclusions, distinguish between fact and opinion, and connect new and previous learning both in written and oral communication.

Comparisons Among Cultures

CONTENT STANDARD 8: Comparisons Among Cultures How do I demonstrate an understanding of the similarities, differences and interactions across cultures?

Compare and contrast the treatment of current issues across cultures by drawing on authentic texts.

Use new and evolving information and perspectives to demonstrate understanding of the similarities and differences across cultures.

Use new and evolving information and perspectives to identify universals of human experience across cultures and to demonstrate empathy and respect for the people(s) of other cultures.

Evaluate the effectiveness of a communicative interaction based on cultural elements.

Communities

CONTENT STANDARD 9: Communities How do I use my knowledge of language and culture to enrich my life and broaden my opportunities?

Communicate with members of the target culture and interpret information regarding topics of personal, community or world interest.

Use their target language skills and demonstrate cultural understanding while participating in career exploration, volunteer experiences, school-to-work projects or school/individual exchanges with homestay.

Critical Content & Skills
What students must KNOW and be able to DO

Students will need to know:

- the preterit and imperfect

- Usted commands

- vocabulary for giving directions for examinations

- vocabulary for symptoms

- vocabulary for vitals

- vocabulary for patient history /habits

- cultural differences in habits

- describe and analyze differences in community and culture that are relevant to patient care

Core Learning Activities

formative:

- listening activities with patients sharing symptoms, history, habits, etc. and translating to English

-Listening Activity: cortometraje "visita al doctor"

- Listening activity Doc Molly podcast Flu Symptoms - comprehension questions - cloze listening

- Peppa Pig vitals listening/video activity

- practice dialogues

-Practice 1: Peardeck with circumlocution

- dialogues using visual cues and circumlocution

-Pear-deck activity to practice the préterit

- practice activities with preterit and imperfect in terms of understanding patient history/care

- practice activities giving patients common commands/directions associated with a visit to the doctor.

- read and analyze article about culture bound syndromes to be able to discuss reconciliation of personal beliefs and regulated health care practices to ensure good patient care (PearDeck guide for activity/discussion found here)

(to be found in Google Drive)
- Direct instruction preterite vs imperfect teacher version and student version

- preterite vs imperfect peardeck practice

- preterite vs imperfect quizizz

Summative:

-dialogo diagnostico -- rubric -- teacher description --

- Listening Symptoms (transcription) student sheet -- teacher sheet

- Listening Patient History (transcription) student sheet -- teacher sheet

Assessments

Dialogo Diagnostico
Summative: Other oral assessments
Student conducts a dialogue with patient to obtain/determine patient symptoms, history, and vitals.

conceptual lens: communication

concepts: care, habits, accuracy, ethics, dialogue, exchange

microconcepts: listening comprehension, interpretation, translation

G Generalizations / Enduring Understandings	Guiding Questions
1. Accuracy with language facilitates patient care.	*Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]*
2. Ethics inform accuracy in communication.	1. How does the accuracy of language affect communication and one's actions? (C)
3. Patient care informs and directs future habits. 4. Accuracy in communication informs future habits and care for the patient.	1. What target language does one need in order to accurately facilitate patient care? (F) 1. What previous grammar,and syntax are need to facilitate patient care? (F) 2. What ethics does one need to understand in order to accurately communicate? (C)
5. Dialogue facilitates patient care.	2. How do ethics affect the care of a patient and the role of the healthcare provider? (C)
6. Listening comprehension, interpretation and translation synergize to create a meaningful and accurate exchange.	3. What care information is needed in order to inform patient future habits? (F)
	3. How do cultural and personal habits affect the health of an individual? (C)
	3. What cultural and personal habits affect the health of an individual? (F) 3.) What previous grammar, syntax and vocabulary are needed to inform patient care and speak about future habits? (F) 4. Does a healthcare provider have a responsibility for the patient's mental and emotional comfort? (P)
	4. What is accuracy in communication? (F)

4. How does one achieve accuracy in communication? (C)

5. How does dialogue facilitate patient care? (C)

5. What dialogue is needed to facilitate patient care? (F)

6. How does one synergize listening comprehension, interpretation and translation to create an accurate and meaningful exchange? (C)

6. What is a meaningful exchange? (C)

6. How does one use previous grammar, syntax and vocabulary to create an accurate and meaningful exchange? (F)

6. What skill does one need to comprehend an exchange? (F)

Standard(s)
Connecticut Core Standards / Content Standards

CT: World Language (2005)
CT: Advanced (9-12)

Communication
CONTENT STANDARD 1: Communication (Interpersonal Mode) How do I use another language to communicate with others?

Participate in culturally appropriate exchanges that reflect social amenities such as expressing gratitude, extending and receiving invitations, apologizing and communicating preferences.

Exchange opinions on a variety of topics, including issues of contemporary or historical interest in the target and their native cultures.

Discuss their personal feelings and ideas with members of the target culture in order to consider alternate viewpoints.

Employ rephrasing and circumlocution, i.e., using other words and gestures to explain words or concepts, to successfully communicate their messages.

CONTENT STANDARD 2: Communication (Interpretive Mode) How do I understand what others are trying to communicate in another language?

Comprehend the main ideas and significant details of full-length feature articles in newspapers, magazines and websites on topics of current or historical importance in the target culture.

Cultures
CONTENT STANDARD 4: Cultures How do I use my understanding of culture to communicate and function appropriately in another culture?

Identify and analyze products and practices of the target culture (e.g., social, economic, legal and political), and explore the relationships between these products and practices and the perspectives of the culture.

Interact in a variety of cultural contexts that reflect both peer group and adult activities within the target culture, using the appropriate verbal and nonverbal clues.

Identify, discuss and analyze various patterns of behaviors or interactions that are typical of the target culture.

Identify, discuss, analyze and evaluate themes, ideas and perspectives that are related to the target culture.

Connections

CONTENT STANDARD 5: Connections (Interdisciplinary Mode) How do I use my understanding of another language and culture to reinforce and expand my knowledge of other disciplines, and vice versa?

Use new information and perspectives gained through world language study to expand their personal knowledge and interdisciplinary connections.

Comparisons Among Languages

CONTENT STANDARD 7: Comparisons Among Languages How do I demonstrate an understanding of the similarities, differences and interactions across languages?

Evaluate the style of a communicative interaction in the target language.

Cite evidence to support conclusions, distinguish between fact and opinion, and connect new and previous learning both in written and oral communication.

Use a writing process in producing work that includes self-assessment and discussion with other students.

Comparisons Among Cultures

CONTENT STANDARD 8: Comparisons Among Cultures How do I demonstrate an understanding of the similarities, differences and interactions across cultures?

Use new and evolving information and perspectives to demonstrate understanding of the similarities and differences across cultures.

Use new and evolving information and perspectives to identify universals of human experience across cultures and to demonstrate empathy and respect for the people(s) of other cultures.

Evaluate the effectiveness of a communicative interaction based on cultural elements.

Communities

CONTENT STANDARD 9: Communities How do I use my knowledge of language and culture to enrich my life and broaden my opportunities?

Communicate with members of the target culture and interpret information regarding topics of personal, community or world interest.

Use their target language skills and demonstrate cultural understanding while participating in career exploration, volunteer experiences, school-to-work projects or school/individual exchanges with homestay.

Critical Content & Skills
What students must KNOW and be able to DO

Students will need to know:

-basic medical ethics.

- grammar and syntax to create exchanges

-how to transcribe and translate follow-up instructions and care from a doctor to a patient.

-vocabulary associated with pharmacies, medication, prognosis, and care instructions.

-legal implications of misinformation in regards to translations.

-use of impersonal expressions using the subjunctive mood.

Core Learning Activities

Formative:

-Students engage in dialogue situations of explanations of diagnosis and instructions for future plans and care, medications and prescriptions, and follow-up visits.

- Students will read about the role of medical translators and understand the ethical implication of translation on health through class discussion

- Students will read about some common habits/lifestyles in the Latin American world and discuss the implications for patient health and care

- Students will engage in conversations in Spanish about ethics and the impact on medical care

- Students role-play situations in which they must make ethical decisions in their communications.

- Students will practice with listening activities of doctor's giving care instructions

Summative:

- Students will transcribe a list of follow-up instructions and care for a fictional patient. (written translation proficiency rubric)

- Una consulta medica dialogue , rubric for dialogue, teacher description, guide for student/teacher

Assessments	Resources
Una consulta medica dialogue	*Professional & Student*
Summative: Other oral assessments	
Students are having a dialogue with a patient from start to finish (reason for visit, registration form, symptoms, patient history, vitals, care plan, and follow up)	- Doc Molly (podcast)
The teacher will refer to 6 "care plans" for equity and fairness in assessment.	- webpage: http://practicingspanish.com/
▤ Unit 3 Final Speaking Assessment Una consulta médica Rubric	1. kidshealth: https://kidshealth.org/es/kids/center/spanish-center-esp.html
▤ Unit 3 Una consulta médica Description	2. CDC: https://www.cdc.gov/spanish/index.html
Care Plan Translation	
Summative: Written Test	
Students are given a care plan in English "from the doctor" that they are to then translate to Spanish, as it will be used later to communicate to the patient.	
▤ Written Translation Proficiency Rubric

Concepts / Conceptual Lens

Please attach your completed Unit Web Template here

conceptual lens: communication

concepts: etiquette, protocol, exchanges, collaboration, audience, professional practice, culture, syntax, diction

microconcepts: emails, phone communications, meetings (live and digital), professionalism

Generalizations / Enduring Understandings

1. Exchanges are solidified through etiquette and protocols.

2. An awareness of audience and exchanges establishes collaboration.

3. Accurate interpretations of emails, phone communications and meetings create professional exchanges.

4. Addressing audience and etiquette in business exchanges shapes professional practice.

5. Collaboration, etiquette, and audience enhance business communication.

6. Syntax and diction facilitate successful business exchanges.

Guiding Questions

Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]

1. What are the etiquette and protocols one needs to know for a business exchange? (F)

1. How do etiquette and protocol affect business exchanges? (C)

1. What is business protocol? (F)

2. What is the vocabulary and grammar necessary to establish collaboration? (F)

2. How does one acknowledge an audience in business exchanges? (C)

2. What is effective collaboration? (P)

3. What skills are necessary for emails, phone communications and meetings? (F)

3. What is a professional exchange? (F)

3. What are the language skills necessary for a professional exchange? (F)

3. What do emails, phone communications and meetings look like in a professional exchange? (F)

4. How does addressing audience and etiquette

cultivate or hinder a professional image? (C)

4. What does one one need to know about audience and etiquette in other countries? (F)

4. Do all professional practices apply to all business, or can they vary and how? (P)

5. How does collaboration, etiquette, and audience enhance business communication? (C)

6. How do syntax and diction facilitate a successful business exchange? (C)

6. What are syntax and diction? (F)

Standard(s)
Connecticut Core Standards / Content Standards

Critical Content & Skills
*What students must **KNOW and be able to DO***

Students need to know:

- culturally appropriate greetings

- greetings/closings of a formal email, meeting

- transition words

- format of a formal email presentation 1 or 2

- use of the usted form

- how to state purpose/goal of email
- the use of ser accurately

- estar +ando/iendo

- how to communicate purpose/goal of communications

- business protocol vocabulary

- interrogatives

- vocabulary to introduce oneself and others

- times of day, days of week, months, numbers 1-31

- polite request structures (sería, gustaría, podría, encantaría)

- ir + a + infinitive to describe future plans

- useful phrases for business exchanges

- vocabulary of various types of businesses and positions

- strategies for understanding an audio

Core Learning Activities

formative:

- listening to recorded messages and student needs to respond to needs of client

- readings and activities about etiquette and culture (NEED to create comprehension questions still)

- activities for reading and responding to emails with prospective clients in the Spanish speaking world

- learn to write formal emails in business (Usted use, transition words, greetings, closings, organization)

Summative assessment:

- collaborative presentation of professional practices in the United States and Spanish speaking countries

- culturally appropriate email exchange introducing self, company

- meeting of the student with prospective clients

Assessments

Practicas profesionales: Cortesias y protocoloes
Summative: Oral Report
El encuentro: interpersonal speaking
Summative: Dramatization
email profesional: interpersonal writing
Summative: Expository Essay

Critical Content & Skills
*What students must **KNOW and be able to DO***

Students need to know:

- cultural differences (societal norms in marketing)

- how to create a website

-persuasive vocabulary (marketing specific, generic Spanish terms, persuasive transitions to compare)

- marketing terms (for advertisements, components of advertisements, main product features, consumer profile, platforms)

- commands (formal/informal)

- Linguistic tools for advertisements (syntax, subject-adjective agreement)

- Persuasion tools: diction, register, tone

- video recording/editing tool

- question formation (querer + noun/infinitive, gustaria/encantaria + noun/infinitive)

- interrogatives (review from previous unit)

Core Learning Activities

Formative:

- Research based comparison of products in America vs. Spanish-speaking countries

- TEACHER RESOURCE: go to products for different cultures (Vicks, Fabuloso, etc.)

- Cultural Comparison Talking Points

- Watching/Listening to/Analyzing Ads in Spanish TEMA worksheet ; publico meta worksheet

- Identify a cultural demographic for one's created product (What does the "Jane Doe" or "John Doe" look like? (A sample consumer portrait helps target and focus marketing campaigns.))

- Actividad: Grupo de enfoque

- Analyzing websites for products and services

- Activity: Site Research/Comparison (find a competitor for your product)

- Asimilador cultural (translating and the value in not making errors, considering cultures)

- Reading: El lenguaje de la publicidad

- Persuasive writing practice (Actividad: Vender agua a un pozo, Twitter, Instagram posts, Facebook posts, radio/podcasts audio) --> Foster a collaborative culture where students produce slogans/mini ads and then analyze each other's (what is the product?, who is it meant for?, effectiveness of the ad?)

- Fluency building activities (turn & talks, any of the activity sheets that require class discussion, on the spot prompts)
- Grupo de enfoque actividad

- Project Proposal Shark Tank

- Follow up questions after presentation - teacher version

- Follow up questions after presentation - student version

- Project planning - perfil del consumidor

Summative:

- Create a marketing website for a product or service rubric ; description of task

- Commercial rubric ; description of task

- Informal Commands quiz

- Formal Commands email writing prompt

- Organizador para el sitio web y anuncio

- FAQ Creation Sheet for website ---- teacher explanation of FAQ setup on Google Classroom

conceptual lens: communication

concepts: accuracy, tone, logistics, transaction, persuasion, sales, finance, audience, professionalism, performance, identity

micro concepts: nonverbal communication, proposition, profit, investment, improvisation, rehearsal, commitment, brand

G
Generalizations / Enduring Understandings

1. Nonverbal communication, tone, and professionalism shape an audience's opinion.

2. Logistics in sales and finance negotiate business transactions.

3. Accuracy in communication encourages investment in a proposition.

4. Persuasion and logistics facilitate profit.

5. Improvisation, rehearsal, and commitment orchestrate a strong business performance.

6. Identity transfers to one's business brand.

Guiding Questions

Please identify the type of question: (F) Factual, (C) Conceptual, (P) Provocative [Debatable]

1a. How do nonverbal communication, tone, and professionalism shape an audience's opinion? (C)

1b. What is professionalism? (C)

1c. What nonverbal communication is appropriate for business? (F)

2a. What language does one need to communicate about logistics in sales and finance? (F)

2b. What are the logistics in sales and finance? (F)

3a. How does accuracy in communication encourage investment in a proposition? (C)

3b. What language tools does one need to be accurate in communication? (F)

4a. What language does one need to be persuasive in stating and supporting an opinion? (F)

4b. How do persuasion and logistics facilitate profit? (C)

	5a. How do improvisation, rehearsal, and commitment orchestrate a strong business performance? (C)
	5b. How does one improvise and rehearse for a strong business performance? (C)
	5c. What is a strong business performance? (C)
	5d. What language tools contribute to a strong business performance? (F)
	6a. How does identity transfer to one's business brand? (C)
	6b. How does one strike a balance between maintaining identity and being successful in business? (C)
	6b. Does one need to change their identity to promote a business brand? (P)
	6c. What is more important: maintaining one's identity or making a sale? (P)

Standard(s)
Connecticut Core Standards / Content Standards

Critical Content & Skills
*What students must **KNOW** and be able to **DO***

Students need to know:

- future tense / ir a + infinitive

- conditional tense

- conditional tense with si clauses (imperfect subjunctive)

- business plan and transaction vocabulary (parts of a business proposal)

- investment vocabulary

- what sales and finance are

- persuasive transitions to present and support an opinion

- performance strategies (improvisation (circumlocution), rehearsal, nonverbal communication)

- idiomatic expressions to enhance presentations

- skills to create a formal business presentation

- professional vs. personal identity and expectations

- present perfect to say what one has done so far

- how to organize a formal organization (steps to complete)

Core Learning Activities

Formative:

- Practice vocabulary through circumlocution + here is the original PearDeck presentation

- Practice dialogues to propose business/sales investments

- Reading business proposals

- Practice persuasive sentences/video activity

- Write your own business proposal (expenses, potential net profit, etc.)

- Q&A practices creating and answering (without prior exposure to the exact questions) + original

- Prueba de vocabulario

- Episodes for listening comprehension of "Shark Tank" in Spanish

- Examine businesses that have changed their brand over time and how it has impacted their image/identity

-Analyze brand identities and establish a brand identity for their own fictional product.

Summative:

- Shark Tank Project: students prepare and present a creative and competitive business or sales investment proposal in the target language. (PowerPoint to intro product/service, spoken intro and sales pitch, Q&A for fiscal components and investment opportunity)

Students

Suspension and Expulsion/Due Process

It is the goal of the Board of Education to ensure the safety and welfare of all students in attendance, and to maintain an atmosphere conducive to learning. In keeping with this goal, students are expected to comply with school rules and regulations, as well as Board policies. Students may be disciplined for conduct on school grounds or at any school-sponsored activity that endangers persons or property, is seriously disruptive of the educational process, or that violates a publicized policy of the Board. Students may be disciplined for conduct off school grounds if such conduct is seriously disruptive of the educational process and violates a publicized policy of the Board.

In working with students, emphasis shall be placed upon developing effective self-discipline as the most effective disciplinary approach.

A.   Definitions

1.   **"Exclusion"** shall be defined as any denial of public school privileges to a student for disciplinary purposes.

2.   **"Removal"** shall be defined as an exclusion from a classroom for all or a part of single class period, provided such exclusion shall not extend beyond ninety (90) minutes.

3.   **"In-School Suspension"** shall be defined as an exclusion from regular classroom activity for no more than ten consecutive school days, but not exclusion from school, provided such exclusion shall not extend beyond the end of the school year in which such in-school suspension was imposed. Such suspensions shall be served in the school attended by the student. (or: Such suspensions may be served in any school building under the jurisdiction of the Board of Education. The Board has determined that in-school suspensions shall be served at all Newtown Schools.

4.   **"Suspension"** shall be defined as an exclusion from school privileges or from transportation services for no more than ten (10) consecutive school days, provided such exclusion shall not extend beyond the end of the school year in which such suspension was imposed. All suspensions shall be in-school suspensions unless the administration determines for any student in grades three through twelve, inclusive, that (1) the student being suspended poses such a danger to persons or property or such a disruption of the educational process that the student (grades three to twelve, inclusive) shall be excluded from school during the period of suspension, or (2) that an out-of-school suspension is appropriate based on evidence of previous disciplinary problems that have led to suspensions or expulsion of the student and efforts by the administration to address such disciplinary problems through means other than out-of-school suspension or expulsion, including positive support strategies.

Students

Suspension and Expulsion/Due Process

A.   Definitions (continued)

A student in grades preschool to two, inclusive, may be given an out-of-school suspension if it is determined by the administration that such suspension is appropriate based on evidence that the student's conduct on school grounds is of a violent or sexual nature that endangers persons. In addition, a person's duty as a mandated reporter to report suspected child abuse or neglect is not limited by this provision.

5.   **"Expulsion"** shall be defined as an exclusion from school privileges for any student in grades three to twelve, inclusive, for more than ten (10) consecutive school days and shall be deemed to include but not be limited to, exclusion from the school to which such student was assigned at the time such disciplinary action was taken, provided that assignment to a regular classroom program in a different school in the district shall not constitute a suspension or an expulsion. Such period of exclusion may extend to the school year following the school year in which the exclusion was imposed, up to one calendar year.

6.   **"Emergency"** shall be defined as a situation under which the continued presence of the student in the school imposes such a danger to persons or property or such a disruption of the educational process that a hearing may be delayed until a time as soon after the exclusion of such student as possible.

7.   **"Days"** is defined as days when school is in session.

8.   **"School-sponsored activity"** is defined as any activity sponsored, recognized or authorized by the Board of Education and includes activities conducted on or off school property.

9.   **"Possess"** means to have physical possession or otherwise to exercise dominion or control over tangible property.

10.   **"Deadly weapon"** means any weapon, whether loaded or unloaded, from which a shot may be discharged, or a switchblade knife, gravity knife, billy, blackjack, bludgeon metal or brass knuckles, any BB gun, any blackjack, any metal or brass knuckles, any police baton or nightstick, any dirk knife or switch knife, any knife having an automatic spring release device by which a blade is released from the handle, having a blade of over one and one- half inches in length, any stiletto, any knife the edged portion of the blade of which is four inches or over in length, any martial arts weapon or electronic defense weapon, as defined in section 53a-3, or any other dangerous or deadly weapon or instrument.

Students

Suspension and Expulsion/Due Process

A. **Definitions** (continued)

11. **"Firearm"** means 1) any weapon (including a starter gun) which will or is designed to or readily be converted to expel a projectile by the action of an explosive; 2) the frame or receiver of any such weapon; 3) any firearm muffler or firearm silencer; or 4) any destructive device. For purposes of this definition "destructive device" means any explosive, incendiary, or poison gas, bomb, grenade, rocket having a propellant charge of more than 4 ounces, missile having an explosive or incendiary charge of more than ¼ ounce, mine, or device similar to any of the weapons described herein.

12. **"Vehicle"** means a **"motor vehicle"** as defined in Section 14-1 of the Connecticut General Statutes, snow mobile, any aircraft, or any vessel equipped for propulsion by mechanical means or sail.

13. **"Martial arts weapon"** means a nunchakum kama, kasari-fundo, octagon sai, tonfa or Chinese star.

14. **"Dangerous Drugs and Narcotics"** is defined as any controlled drug in accordance with Connecticut General Statutes §21a-240.

15. **"Dangerous Instrument"** is any instrument, article or substance that, under the circumstances in which it is used or attempted or threatened to be used, is capable of causing death or serious physical injury.

16. **"Alternate education"** means a school or program maintained and operated by the Board of Education that is offered to students in a nontraditional setting and addresses their social, emotional, behavioral and academic needs. Such program must conform to SBE guidelines and conform to C.G.S 10-15 & 16 (180 days/900 hours)

B. **Removal from Class**

1. All teachers are hereby authorized to remove a student from class when such student causes a serious disruption of the educational process within the classroom.

2. Such teacher shall send the student to the office and shall immediately inform the building Principal or his/her designee as to the name of the student and the reason for removal.

C. **Exclusion from Co-Curricular and Extra-Curricular Activities**

Participation in co-curricular and extra-curricular activities is a privilege and not an entitlement. Students involved in such programs are expected to follow all school rules and demonstrate good citizenship. Failure to do so may result in partial or complete exclusion from said activities and programs. Activities include, but are not limited to, athletic programs, musical or drama productions, clubs, field trips, and school trips out-of-state and abroad.

Students

Suspension and Expulsion/Due Process (continued)

D. **Suspension and Expulsion**

1. A student may be suspended (in-school) or suspended (out-of-school) or expelled (grade three to twelve, inclusive) for conduct on school property or at a school-sponsored activity that endangers persons or property, is violative of a publicized policy of the Board, or is seriously disruptive of the educational process, including but not limited to one or more of the following reasons:

   a. Conduct causing danger to the physical well-being of himself/herself or other people that is not reasonably necessary for self-defense;

   b. Intentionally causing or attempting to cause physical injury to another person that is not reasonably necessary for self-defense;

   c. Intentionally causing or attempting to cause damage or school property or material belonging to staff (private property);

   d. Stealing or attempting to steal private or school property or taking or attempting to take personal property or money from any other person;

   e. The use, either spoken or written on clothing, of obscene or profane language or gestures on school property or at a school-sponsored activity;

   f. Deliberate refusal to obey the directions or orders of a member of the school staff;

   g. Harassment and/or hazing/bullying on the basis of that person's race, religion, ethnic background, gender or sexual orientation;

   h. Open defiance of the authority of any teacher or person having authority over the student, including verbal abuse;

   i. Threatening in any manner, including orally, in writing, or via electronic communication, a member of the school including any teacher, a member of the school administration or any other employee, or a fellow student;

   j. Blackmailing a member of the school community, including any teacher, member of the school administration or any other employee or fellow student;

   k. Possession of a firearm, deadly weapon, dangerous instrument, or martial arts weapon, as defined in Section 53a-3, such as a pistol, knife, blackjack, etc.;

   l. Possession of any weapon or weapon facsimile, including but not limited to knife, pistol, pellet guns and/or air soft pistols;

   m. Possession, transmission, distribution, selling, use or consumption of alcoholic beverages, dangerous drugs or narcotics or intoxicant of any kind or any facsimile of a dangerous drug, narcotic or intoxicant of any kind;

Students

Suspension and Expulsion/Due Process

D.   Suspension and Expulsion (continued)

n.   Knowingly being in the presence of those who are in possession of using, transmitting, or being under the influence of any dangerous drug, narcotic, hallucinogenic drug, amphetamine, barbiturate, marijuana, alcoholic beverage, or intoxicant of any kind;

o.   Participation in any unauthorized occupancy by any group of students or others of any part of any school, school premises or other building owned by any school district after having been ordered to leave said school premises or other facility by the Principal or other person then in charge of said school building or facility;

p.   Participation in any walkout from a classroom or school building by any group of students and refusing to immediately return to said classroom or school building after having been directed to do so by the Principal or other person then in charge of said classroom or school building;

q.   Intentional incitement which results in an unauthorized occupation of, or walkout from, any school building, school premises, facility or classroom by any group of students or other persons;

r.   Repeated unauthorized absence from or tardiness to school;

s.   Intentional and successful incitement of truancy by other students;

t.   The use or copying of the academic work of another and the presenting of it as one's own without proper attribution;

u.   Violation of school rules and practices or Board policy, regulation or agreement, including that dealing with conduct on school buses and the use of school district equipment;

v.   Violation of any federal or state law which would indicate that the violator presents a danger to any person in the school community or to school property;

w.   Lying, misleading or being deceitful to a school employee or person having authority over the student;

x.   Unauthorized leaving of school or school-sponsored activities;

y.   Unauthorized smoking.

Students

Suspension and Expulsion/Due Process (continued)

E.   Suspension for Conduct Off School Grounds

1.   Students are subject to suspension for conduct off school property and outside of school-sponsored activities in accordance with law, for conduct that violates a publicized policy of the Board and is seriously disruptive of the educational process, including but not limited to the following:

a.   Conduct leading to a violation of any federal or state law if that conduct is determined to pose a danger to the student himself/herself, other students, school employees or school property.

b.   Adjudication as a delinquent or a youthful offender as the result of a felony if the conduct leading to the adjudication is determined to pose a danger to the student himself/herself, other students, school employees or school property.

2.   In making a determination as to whether conduct is "seriously disruptive of the educational process," the administration, Board of Education or impartial hearing board may consider, but such consideration shall not be limited to; (1) whether the incident occurred within close proximity of a school; (2) whether other students from the school were involved or whether there was any gang involvement; (3) whether the conduct involved violence, threats of violence or the unlawful use of a weapon as defined in Section 29-38 and whether any injuries occurred, and (4) whether the conduct involved the use of alcohol, narcotic drug, hallucinogenic drug, amphetamine, barbiturate or marijuana.

F.   Mandatory Expulsion

It shall be the policy of the Board to expel a student, grades preschool, and kindergarten to twelve, inclusive, for one full calendar year if:

1.   The student, on grounds or at a school-sponsored activity, was in possession of a firearm, as defined in 18 U.S.C. 921*, as amended from time to time, or deadly weapon, dangerous instrument or martial arts weapon, as defined in C.G.S. 53A-3; or the student, off school grounds, did possess such firearm in violation of C.G.S. 29-35 or did possess and use such a firearm, instrument or weapon in the commission of a crime; or the student, on or off school grounds offered for sale or distribution a controlled substance, as defined in subdivision (9) of C.G.S. 21a-240, whose manufacture, distribution, sale, prescription, dispensing, transporting or possessing with intent to sell or dispense, offering or administering is subject to criminal penalties under C.G.S. 21-277 and 21a-278.

*A firearm; currently defined by 18 U.S.C. 921, is any weapon that can expel a projectile by an explosive action and includes explosive devices, incendiaries, poison gases, and firearm frames, receivers, mufflers or silencers.

Students

Suspension and Expulsion/Due Process

F.   Mandatory Expulsion (continued)

    2.   Such a student shall be expelled for one calendar year if the Board of Education or impartial hearing board finds that the student did so possess or so possess and use, as appropriate, such a weapon or firearm, instrument or weapon or did so offer for sale or distribution such a controlled substance.

    3.   The Board may modify the period of a mandatory expulsion on a case-by-case basis.

    4.   A firearm, as defined by C.G.S. 53a-3 includes any sawed-off shotgun, machine gun, rifle, shotgun, pistol, revolver, or other weapon, whether loaded or unloaded from which a shot may be discharged, or a switchblade knife, a gravity knife, billy, black jack, bludgeon or metal knuckles.

    5.   A student enrolled in a preschool program provided by the Board of Education, state or local charter school or interdistrict magnet school shall not be expelled from such school except that a student shall be expelled for one calendar year from such preschool program pursuant to the mandatory expulsion requirement in compliance with the Gun-Free School Act, as described in this section.

G.   Suspension Procedure

    1.   The administration of each school shall have the authority to invoke suspension for a period of up to ten days or to invoke in-school suspension for a period of up to ten school days of any student for one or more of the reasons stated in paragraph C, above, in accordance with the procedure outlined in this paragraph. Suspensions shall be in-school suspensions unless the administration determines that the student being suspended poses such a danger to persons or property or such a disruption of the educational process that the student shall be excluded from school during the period of suspension. The administration may also consider a student's previous disciplinary problems when deciding whether an out-of-school suspension is warranted, as long as the school previously attempted to address the problems by means other than an out-of-school suspension or an expulsion.

        The administration is expected to use the guidelines developed and promulgated by the Commissioner of Education to help determine whether a student should receive an in-school or out-of-school suspension.

Students

Suspension and Expulsion/Due Process

G. **Suspension Procedure (**continued)

The administration shall also have the authority to suspend a student from transportation services whose conduct while awaiting or receiving transportation violates the standards set forth in paragraph C, above. The administration shall have the authority to immediately suspend from school any student when an emergency exists as that term is defined in paragraph A, above.

If an emergency situation exists, the hearing outlined in paragraph G (3) shall be held as soon as possible after the exclusion of the student.

2. In the case of suspension, the administration shall notify the student's parents and the Superintendent of Schools not later than twenty-four (24) hours of the suspension as to the name of the student who has been suspended and the reason therefore. Any student who is suspended shall be given an opportunity to complete any class work including, but not limited to, examinations which such student missed during the period of his/her suspension.

3. Except in the case of an emergency, as defined in paragraph A, above, a student shall be afforded the opportunity to meet with the administration and to respond to the stated charges prior to the effectuation of any period of suspension or in-school suspension. If, at such a meeting the student denies the stated charges, he/she may at that time present his/her version of the incident(s) upon which the proposed suspension is based. The administration shall then determine whether or not suspension or in-school suspension is warranted. In determining the length of a suspension period, the administration may receive and consider evidence of past disciplinary problems which have led to removal from a classroom, in-school suspension, or expulsion.

4. No student shall be suspended more than ten times or a total of fifty (50) days in one school year, whichever results in fewer days of exclusion, unless a hearing as provided in paragraph H(5) is first granted.

5. No student shall be placed on in-school suspension more than fifteen times or a total of fifty (50) days in one school year, whichever results in fewer days of exclusion, unless a hearing as provided in paragraph H(5) is first granted.

Students

Suspension and Expulsion/Due Process (continued)

H.   Expulsion Procedures

1.   The Board of Education may, upon recommendation of the Superintendent of Schools, expel any student for one or more of the reasons stated in this policy if in the judgment of the Board of Education, such disciplinary action is in the best interest of the school system.

2.   Upon receipt of a recommendation for expulsion from the Superintendent of Schools the Board shall, after giving written notice, at least five (5) business days before such hearing, to the student and his parents or guardian, if said student is less than 18 years of age, conduct a hearing prior to taking any action on the expulsion of said student, provided however, that in the event of an emergency as defined in this policy, the student may be expelled prior to the hearing but in such case even a hearing shall be held as soon after the expulsion as possible. The notice shall include information concerning the student's and his/her parent's/guardian's legal rights and concerning legal services that are provided free of charge or at a reduced rate that are available locally (CT Legal Service a source of such services) and how to access such services. An attorney or other advocate may represent any student subject to expulsion proceedings. The parent/guardian of the student has the right to have the expulsion hearing postponed for up to one week to allow time to obtain representation, except that if an emergency exists, such hearing shall be held as soon after the expulsion as possible.

3.   ~~A quorum of the Board of Education will be present for an expulsion hearing. A student may be expelled if a majority of the Board members sitting in the expulsion hearing vote to expel.~~ Expulsion hearings conducted by the Board will be heard by any three or more Board members. A decision to expel a student must be supported by a majority of the Board members present, provided that no less than three (3) affirmative votes to expel are cast. If fewer than three Board members are available then the Board Chair, in consultation with the Superintendent, may appoint a hearing officer.

Alternatively, the Board may appoint an impartial hearing board composed of one (1) or more persons to hear and decide expulsion matters, provided that no member of the Board may serve on such panel. The Board may include a time period for the appointment.

4.   A special education student's handicapping conditions shall be considered before making a decision to expel. A Planning and Placement Team (PPT) meeting must be held to determine whether the behavior or student actions violative of Board of Education standards set forth in policy governing suspension and expulsion are the result of the student's handicapping condition.

5.   The procedure for any hearing conducted under this paragraph shall at least include the right to:

Students

Suspension and Expulsion/Due Process

H.   Expulsion Procedures (continued)

a.   Notice prior to the date of the proposed hearing which shall include a statement of the time, place and nature of the hearing and a statement of the legal jurisdiction under which the hearing is to be held and a statement that students under sixteen years old who are expelled and students between sixteen and eighteen who have been expelled for the first time and who comply with conditions set by the Board of Education, must be offered an alternative educational opportunity;

b.   A short and plain statement of the matters asserted, if such matters have not already been provided in a statement of reasons requested by the student;

c.   The opportunity to be heard in the student's own defense;

d.   The opportunity to present witnesses and evidence in the student's defense;

e.   The opportunity to cross-examine adverse witnesses;

f.   The opportunity to be represented by counsel at the parents'/student's own expense; and

g.   Information concerning legal services provided free of charge or at a reduced rate that are available locally and how to access such services;

h.   The opportunity to have the services of a translator, to be provided by the Board of Education whenever the student or his/her parent or legal guardian do not speak the English language;

i.   The prompt notification of the decision of the Board of Education, which decision shall be in writing if adverse to the student concerned.

6.   The record of the hearing held in any expulsion case shall include the following:

a.   All evidence received and considered by the Board of Education;

b.   Questions and offers of proof, objections and ruling on such objections;

c.   The decision of the Board of Education rendered after such hearing; and

d.   A copy of the initial letter of notice of proposed expulsion, a copy of any statement of reasons provided upon request, a statement of the notice of hearing and the official transcript, if any or if not transcribed, any recording or stenographic record of the hearing.

Students

Suspension and Expulsion/Due Process

H.   Expulsion Procedures (continued)

7.   Rules of evidence at expulsion hearings shall assure fairness, but shall not be controlled by the formal rules of evidence, and shall include the following:

a.   Any oral or documentary evidence may be received by the Board of Education but, as a matter of policy, irrelevant, immaterial or unduly repetitious evidence may be excluded. In addition, other evidence of past disciplinary problems which have led to removal from a classroom, in-school suspension, suspension, or expulsion may be received for considering the length of an expulsion and the nature of the alternative educational opportunity, if any, to be offered;

b.   The Board of Education shall give effect to the rules of privilege by law;

c.   In order to expedite a hearing, evidence may be received in written form, provided the interest of any party is not substantially prejudiced thereby;

d.   Documentary evidence may be received in the form of copies or excerpts;

e.   A party to an expulsion hearing may conduct cross-examination of witnesses where examination is required for a full and accurate disclosure of the facts;

f.   The Board of Education may take notice of judicially relevant facts in addition to facts within the Board's specialized knowledge provided, however, the parties shall be notified either before or during the hearing of the material noticed, including any staff memoranda or data, and an opportunity shall be afforded to any party to contest the material so noticed;

g.   A stenographic record or recording of any oral proceedings before the Board of Education at an expulsion hearing shall be made provided, however, that a transcript of such proceedings shall be furnished upon request of a party with the cost of such transcript to be paid by the requesting party. Findings of fact made by the Board after an expulsion hearing shall be based exclusively upon the evidence adduced at the hearing.

h.   Decisions shall be in writing if adverse to the student and shall include findings of fact and conclusions necessary for the decision. Findings of fact made by the Board after an expulsion hearing shall be based exclusively upon the evidence adduced at the hearing.

Students

Suspension and Expulsion/Due Process

H.   Expulsion Procedures (continued)

8.   For any student expelled for the first time and who has never been suspended, except for a student who has been expelled based on possession of a firearm or deadly weapon, the Board of Education may shorten the length of or waive the expulsion period if the student successfully completes a Board specified program and meets any other conditions required by the Board. Such a Board specified program shall not require the student or the parent/guardian of such student to pay for participation in the program.

I.   Notification

1.   All students and parents within the jurisdiction of the Board of Education shall be informed, annually, of Board Policy governing student conduct by the delivery to each said student of a written copy of said Board Policy.

2.   The parents or guardian of any minor student either expelled or suspended shall be given notice of such disciplinary action no later than 24 hours of the time of the institution of the period of expulsion or suspension.

3.   The notice of an expulsion hearing shall be given at least five (5) business days before such hearing to the student and his/her parents or guardians, if said student is less than 18 years of age shall include information concerning the parent's/guardian's and the student's legal rights and concerning legal services that are provided free of charge or at a reduced rate that are available and how to access such services. The notification shall include a statement that an attorney or other advocate may represent any student subject to expulsion proceedings. The parent/guardian of the student shall be notified of the right to have the expulsion hearing postponed for up to one week to allow time to obtain representation, except that if an emergency exists, such hearing shall be held as soon after the expulsion as possible.

J.   Students with Disabilities

A special education student's IEP and/or 504 disability shall be considered before making a decision to suspend. A student with disabilities may be suspended for up to ten school days in a school year without the need for the district to provide any educational services. A disabled student may be additionally removed (suspended) for up to ten school days at a time for separate acts of misconduct as long as the removals do not constitute a pattern. During any subsequent suspension of ten days or less of a student with disabilities, the district shall provide services to the disabled student to the extent determined necessary to enable the student to appropriately advance in the general education curriculum and toward achieving his/her IEP goals. In cases involving removals for ten days or less, school personnel (school administration) in consultation with the child's special education teacher, shall make the service determination.

Students

Suspension and Expulsion/Due Process

J.   Students with Disabilities (continued)

If the disabled student's suspensions beyond ten school days in a school year constitute a pattern because of factors such as the length of each removal, the total amount of time the child is removed and the proximity of the removals to one another, the IEP team (PPT) shall conduct a manifestation determination. Meetings of a student's IEP team (PPT) are required to develop a behavioral assessment plan or to review and modify as necessary one previously developed when the disabled student has been removed (suspended) from his/her current placement for more than ten school days in a school year and when commencing a removal (suspension) that constitutes a change in placement.

Whenever a student is suspended, notice of the suspension and the conduct for which the student was suspended shall be included on the student's cumulative educational record. Such notice shall be expunged from the record by the Board if the student graduates from high school.

Notwithstanding the foregoing, the following procedures shall apply to students who have been identified as having one or more disabilities under the IDEA and/or Section 504 of the Rehabilitation Act (a "student with disabilities"):

1.   If a student with disabilities engages in conduct that would lead to a recommendation for expulsion, the district shall promptly convene an IEP team (PPT) meeting to determine whether the misconduct was caused by or had a direct and substantial relationship to the student's disability or if the conduct in question was the direct result of the District's failure to implement the IEP. A student may be suspended for up to ten days pending the IEP team (PPT) determination.

2.   If the District, parent and relevant members of the IEP team (PPT) determine that the misconduct was not caused by the disability, the Superintendent may proceed with a recommendation for expulsion. During any period of expulsion, a student with disabilities under the IDEA shall receive an alternative educational plan consistent with the student's educational needs as determined by the IEP team (PPT) in light of such expulsion and the student's IEP. The services must continue to the extent determined necessary to enable the disabled student to appropriately advance in the general education curriculum and to advance toward achieving the goals of his/her IEP, and be provided a free appropriate public education.

Students

Suspension and Expulsion/Due Process

J. Students with Disabilities (continued)

3. If the District, parent and relevant members of the IEP team (PPT) determine that the misconduct was caused by or had a direct and substantial relationship to the disability, or the conduct in question was the direct result of the District's failure to implement the student's IEP, the Superintendent shall not proceed with the recommendation for expulsion. The IEP team (PPT) shall consider the student's misconduct and revise the IEP to prevent a recurrence of such misconduct and to provide for the safety of the other students and staff. A functional behavioral assessment shall be conducted, if not previously done, and a behavioral intervention plan implemented or revised, if in existence. The student shall be returned to the placement from which he/she was removed unless agreed otherwise by the District and parent.

4. Should a parent of a student with disabilities who is eligible for services under the IDEA (or the student himself/herself if eighteen years of age or older) file a request for a due process hearing to contest an expulsion under subparagraph (2) above or a proposed change in placement under subparagraph (3), unless the parents (or student if eighteen years of age or older) and the Board otherwise agree, the child shall stay in the interim alternate educational setting, if so placed by student authorities, pending decision in said due process hearing and any subsequent judicial review proceedings.

5. Notwithstanding the provisions of the preceding subparagraph (4), a student with disabilities may be assigned to an interim alternative educational setting for not more than forty-five (45) school days if the student brings a weapon to school or to a school function or knowingly possesses or uses illegal drugs or sells or solicits the sale of a controlled substance while at school or a school function, or has inflicted serious bodily injury upon another person while at school, on school premises, or at a school function. For purposes of this paragraph, "weapon" means a device instrument, material, or substance, animate or inanimate, that is used for, or is readily capable of, causing death or serious bodily injury, but excludes a pocket knife with a blade of less than 2 ½ inches in length. "Serious bodily injury" is defined as bodily injury which involves a substantial risk of death, extreme physical pain, protracted and obvious disfigurement or protracted loss or impairment of the function of a bodily member, organ or mental faculty. The interim alternative placement shall be determined by the IEP team (PPT). If a due process hearing is requested, the student shall remain in said interim alternative placement pending a decision in the due process hearing, unless the Board and the parents otherwise agree, or the Board obtains a court order.

Students

Suspension and Expulsion/Due Process

J.   Students with Disabilities (continued)

6.   In order for the district to unilaterally obtain a 45-day change in placement from a federal judge of Connecticut hearing officer, it must prove by substantial evidence that maintaining the current placement of the student is substantially likely to result in injury to the child or others. The school must also prove that it has made reasonable efforts to minimize the risk of harm the student presents in the current placement.

K.   Alternative Educational Opportunity

The Board of Education recognizes its obligation to offer any student under the age of sixteen (16) who is expelled an alternative educational opportunity which shall be equivalent to alternative education, as defined, with an individualized learning plan, during the period of expulsion. Any parent or guardian of such student who does not choose to have his or her child enrolled in an alternative educational program shall not be subject to the provision of Section 10-184 of the Connecticut General Statutes. Any expelled student who is between the ages of sixteen (16) and eighteen (18) not previously expelled and who wishes to continue his or her education shall be offered such an alternative educational opportunity if he or she complies with conditions established by the Board of Education. Such alternative educational opportunity may include, but shall not be limited to, the assignment of a student (who is seventeen (17) years of age or older) to an adult education program or placement of such student in a regular classroom program of a school other than the one from which the student has been excluded. Any student participating in an adult education program during a period of expulsion shall not be required to withdraw from school under C.G.S. 10-184. In determining the nature of the alternative education opportunity to be offered under this Section, the Board of Education may receive and consider evidence of past disciplinary problems which have led to removal from a classroom, suspension, or expulsion.

The Board of Education is not obligated to provide such alternative educational opportunity to any student eighteen years of age or older. The Board of Education is also required to offer such alternative educational opportunity, as defined, to any student between the ages of sixteen and eighteen who is expelled because of conduct which endangers persons, and involved the following, on school grounds or at a school-sponsored event:

1.   Possession of a firearm, deadly weapon, dangerous instrument or martial arts weapon, or

2.   Offering an illegal drug for sale or distribution.

Students

Suspension and Expulsion/Due Process

K. **Alternative Educational Opportunity** (continued)

If the Board expels a student for the sale or distribution of a controlled substance, the Board shall refer the student to an appropriate state or local agency for rehabilitation, intervention or job training, or any combination thereof, and inform the agency of its action. If a student is expelled for possession of a firearm, deadly weapon, dangerous instruments (those that can be used to cause death or serious injury) or martial arts weapons the Board shall report the violation to the local police department.

This provision shall not apply to students requiring special education who are described in subdivision (1) of sub-section (e) of C.G.S. 10-76a. The alternative educational opportunity for any such student shall be established by the IEP team (PPT) in accordance with the procedures described above.

L. **Other Considerations**

1. If a student is expelled, notice of the expulsion and the conduct for which the student was expelled shall be included on the student's cumulative educational record. Such notice, except for the notice of an expulsion of a student in grades nine through twelve, inclusive, based on possession of a firearm or deadly weapon, shall be expunged from the cumulative educational record by the Board if the Board determines that the student's conduct and behavior in the years following such expulsion warrants an expungement or if the student graduates from high school.

2. If a student's expulsion is shortened or the expulsion period waived based upon the fact that the student was expelled for the first time, had never been suspended, and successfully completed a Board specified program and/or met other conditions required by the Board, the notice of expulsion shall be expunged from the cumulative educational record if the student graduates from high school or, if the Board so chooses, at the time the student completes the Board specified program and meets any other conditions required by the Board.

3. If a student in grades kindergarten to eight, is expelled based on possession of a firearm or deadly weapon, the Board may expunge from the students' cumulative education record the notice of the expulsion and the conduct for which the student was expelled if the Board determines that the conduct and behavior of the student in the years following such expulsion warrants an expungement.

Students

Suspension and Expulsion/Due Process

L.   Other Considerations (continued)

4.   The Board may adopt the decision of a student expulsion hearing conducted by another school district provided such Board of Education held a hearing pursuant to C.G.S.10-233d(a). Adoption of such a decision shall be limited to a determination of whether the conduct which was the basis for the expulsion would also warrant expulsion under the policies of this Board. The student shall be excluded from school pending such hearing. The excluded student shall be offered an alternative education opportunity in accordance with item K above.

5.   Whenever a student against whom an expulsion hearing is pending withdraws from school and after notification of such hearing but before the hearing is completed and a decision rendered, (1) notice of the pending expulsion hearing shall be included on the student's cumulative educational record and (2) the Board shall complete the expulsion hearing and render a decision.

6.   A student expelled for possession of a firearm, deadly weapon, dangerous instrument or martial arts weapon shall have the violation reported to the local police department.

7.   The period of expulsion shall not extend beyond a period of one calendar year. A period of exclusion may extend into the next school year.

8.   An expelled student may apply for early readmission to school. Such readmission shall be at the discretion of the Board of Education or their designee. Readmission decisions shall not be subject to appeal to Superior Court. The Board or their designee may condition such readmission on specified criteria.

9.   Any student who commits an expellable offense and is subsequently committed to a juvenile detention center, The Connecticut Juvenile Training School or any other residential placement for such offense may be expelled by the local Board of Education. The period of expulsion shall run concurrently with the period of commitment to a juvenile detention center, the Connecticut Juvenile Training School or any other residential placement.

Readmission of Student from a Residential Placement

A District student who has committed an expellable offense who seeks to return to a District school, after participating in a diversionary program or having been detained in a juvenile detention center, the Connecticut Juvenile Training School or any other residential placement, for one year or more, in lieu of expulsion from the District, shall be permitted to return to the appropriate school setting within the District. Further, the District shall not expel the student for any additional time for the offense(s).

Students and parents shall be notified of this policy annually.

Board of Education
Newtown, Connecticut

Minutes of the Board of Education meeting held on March 21, 2023, at 7:00 p.m. in the Council Chambers, 3 Primrose Street. .

D. Zukowski, Chair	C. Melillo
J. Vouros, Vice Chair	A. Uberti
D. Ramsey, Secretary	T. Vadas (absent)
D. Cruson (absent)	3 Staff
J. Kuzma	2 Public
J. Larkin (absent)	1 Press
A. Plante	
K. Kunzweiler	
D. Godino	

Ms. Zukowski called the meeting to order at 7:02 p.m.

Item 1 – Pledge of Allegiance
Item 2 – Consent Agenda
MOTION: Mr. Vouros moved that the Board of Education approve the consent agenda, which includes the Newtown High School field trip to Italy and the correspondence report.
Mrs. Kuzma seconded. Motion passes unanimously.

Item 3 – Public Participation
Item 4 – Reports
Chair report: Ms. Zukowski reported that Newtown has had plenty to celebrate. Some of the talented NHS artists won awards at the recent Brookfield Craft Center Artists on the Rise Show (https://www.brookfieldcraft.org/artistsontherise2022/). Ms. Zukowski congratulated Melissa Tagliarini, for first place in painting, Malcolm Zimmerman and Eva Barricelli for second and third place in drawing, respectively, Maren Leyva for third place in Clay/Ceramic art, Amelia Rivera for third place in wearable art, Ellie Arcario for Scholastic Honorable Mention, and to all whose art was included in the show. Ms. Zukowski continued by congratulating Newtown High School on a stupendous production of Into the Woods. And our very own Kirtana Kunzweiler was spectacular in her role as the witch. Congratulations to all!

Superintendent report: Mr. Melillo congratulated the Newtown High School Cheer Team on winning Team of the Year. It is a State Open event that features all of the top teams in Connecticut. Newtown scored 92 points to overcome Danbury. Mr. Melillo also reported that Newtown High School girls' basketball team made it to the Class LL State Tournament semifinals. The Nighthawks were defeated by Fairfield Ludlow in the semifinals. Mr. Melillo expressed how proud he was of the team. Lastly, Mr. Melillo reported that Ramadan starts tomorrow. He will be attending Hedaya Islamic Center with Dan Rosenthal sharing Ramadan dinner on Sunday, March 26th.

Committee reports:
Mr. Vouros reported that the Curriculum and Instruction subcommittee met today and he will have a report for the Board at the next meeting.

Mr. Ramsey visited Newtown Middle School for the Blues Festival on St. Patrick's Day. He said it was phenomenal and showed a wonderful history of African Americans in the United States

through the lens of music. He was also able to see Into the Woods at the high school and thought it was spectacular.

Students Representative Reports:
Mr. Godino reported that students were surprised with bagpipes in the lobby on St. Patrick's Day. The music and teacher's dance routine brought joy to the staff and students. The company of Into the Woods performed five fantastic shows for the public. The production was an enormous success. Mr. Godino ended his report by stating seniors have been met with many college decisions. The class of 2023 has built an impressive list of acceptances with lots of exciting news still to come!

Ms. Kunzweiler reported that NHS staff held their first chili contest with many teachers contributing their recipes to the competition. Congratulations to Mrs. Kaplan, Mrs. Davey and Mr. Ekman for winning the first of many NHS chili contests. Members of the men's swim team finished the season with impressive swims at State Championships and State Opens. The Newtown Dance team is also gearing up to compete at New England Championships. Finally, quarter 3 comes to a close at the end of this week. Students are excited to finish the year off strong and enjoy what the spring season has to offer.

Financial Report:
MOTION: Mr. Vouros moved that the Board of Education approve the financial report for the month ending February 28, 2023. Mrs. Kuzma seconded.

Mr. Melillo presented the financial report in Mrs. Vadas' absence.

Motion passes unanimously.

Item 5 – Presentations.
Medical Spanish:
Elizabeth Ward, World Language Department Chair, presented this curriculum.

Mr. Ramsey complemented Ms. Ward on this innovative course. He asked if she had the opportunity to network with other Districts that may have courses of this kind.
Ms. Ward answered that she has not but she would be happy to reach out to schools that have this course. Ms. Ward would like to offer more electives that are career and interest-focused.
Mr. Ramsey thanked Ms. Ward for her enthusiasm.

Mr. Vouros asked if it was possible to consider having personnel from the medical field come into the classrooms.
Ms. Ward said that she would be happy to have medical professionals come into the classroom to share their experiences.

Business Spanish:
Elizabeth Ward, World Language Department Chair, presented this curriculum.

Mrs. Plante asked if this course was an elective versus part of the student's foreign language progression.
Ms. Ward answered that her vision is that students take two years of high school Spanish as a base level and then use this elective as an upper level.

Mrs. Kuzma asked if Ms. Ward expects that the two year base will change now that the upcoming students will have more experience with language.
Ms. Ward said that she has been told that a lot of elementary Spanish is natural language acquisition and not a heavy focus on reading and writing. Ms. Ward would like students to have those base skills before getting to this type of elective course.

Mr. Vouros recommends using the Visual and Performing Arts department as a resource for the Business Spanish student's presentations.
Mr. Ramsey noticed that a lot of these concepts in this course are transferrable to real life and other subjects.
Mr. Vouros asked how many students were enrolled in these courses.
Ms. Ward answered that 11 students are currently enrolled in Business Spanish and 15 students currently enrolled in Medical Spanish.

Ms. Zukowski complemented Ms. Ward on two wonderful courses. Ms. Zukowski asked about cross-fertilization between courses at the high school.
Ms. Ward answered that she would look into it.
Ms. Zukowski asked if there was a way to differentiate on academic levels.
Ms. Ward said that there is an opportunity to do that on every level but it will take some time for this course to do that.

Mr. Vouros believes that once this class starts, the enrollment will rise dramatically.
Ms. Ward thanked everyone for their support.

Item 6 – Old Business
Myth and the Modern World Curriculum:
MOTION: Mr. Vouros moved that the Board of Education approve the Myth and the Modern World Curriculum. Mrs. Plante seconded. Motion passes unanimously

MOTION: Mr. Vouros moved that the Board of Education approve Policy 4134 Tutoring. Mrs. Plante seconded. Motion passes unanimously.

MOTION: Mr. Vouros moved that the Board of Education rescind Policy 4-104 Professional Development. Mrs. Plante seconded. Motion passes unanimously.

MOTION: Mr. Vouros moved that the Board of Education rescind Policy 4-105 Continuing Education Units. Mrs. Plante seconded. Motion passes unanimously.

MOTION: Mr. Vouros moved that the Board of Education rescind Policy 4-602 Soliciting and Selling. Mrs. Plante seconded. Motion passes unanimously.

MOTION: Mr. Vouros moved that the Board of Education rescind Policy 4-603 Tutoring Students. Mrs. Plante seconded. Motion passes unanimously.

Transportation Update:
Mr. Melillo reported that there are three drivers that will be testing with the DMV. One driver will be ready to start this week. The other two have test dates within the next two weeks. Aside from them, there are four more drivers going through the training process. One driver started the training class and the remaining three will start a class in April. Additionally, there are three applicants that went in for an interview. Mr. Melillo thanked his team for their hard work.

Item 7 – New Business
Non-Lapsing Fund Update:
Mr. Melillo provided the Board with an outline of what Newtown deposited into the fund from 2013 to current. It shows what was earmarked and what was expended. Currently, there is a balance of $475,305. We reported to the Board of Finance and Legislative Council that we were going to earmark $200,000 for special education funds and $140,000 for the replacement chiller at Reed Intermediate.
Ms. Zukowski added that the Board of Finance is still working through the joint policy and it is looking positive that we will have a final solution soon.

BOE Communications Subcommittee Newsletter:
MOTION: Mr. Vouros moved that the Board of Education approve the Board of Education Communications Sub-committee Newsletter. Mr. Ramsey seconded.
Motion passes unanimously.

Minutes of March 7, 2023:
Mr. Vouros moved that the Board of Education approve the minutes of March 7, 2023.
Mr. Ramsey seconded. Motion passes unanimously.

Item 8 – Public Participation
Michelle Pranger, 1 Cross Brook Road, Newtown, expressed her negative experiences while her son attended Newtown Public Schools.

Mr. Vouros moved to adjourn. Mr. Ramsey seconded. Motion passes unanimously.

Item 9 – Adjournment
The meeting adjourned at 7:53 pm.

                                        Respectfully submitted:

                                        _____
                                                    Donald Ramsey
                                                       Secretary
